

## All about **JENSEN** Tool-Kits

In a rapidly expanding service industry, the proper toolkit is as valuable as your right arm. HVAC, telecom, industrial install and Networking are growing industries and having the right kit to service your customers is essential.

Jensen Tools innovation in kits has been copied but never matched. We can offer many solutions in kitting from standard to customized and tool control. But with so many offerings, how do you choose the right kit?

### **TSA Approved Roto Rugged Case w/ Wing Pallets**

Start with the case. Do you need a small bag with sewn in pallets or the big 25" wide rolling case? Are you going to be taking this kit on an airplane? We have TSA approved kits ready to go. Our very popular Roto-Rugged case with recessed latches, padlock loop, 4 wheels with pull out tote handle is set up for the TSA guys. No more cases broken open, latches busted or tools spilling out of the baggage carousel with these rugged cases.

Pallets are next and we offer six different styles from our side-hinged, bottom hinged, wing pallets and individual pallets for the hard-sided cases. Most of our soft cases offer quick change pallets or sewn in pallets. You can purchase these pallets empty or complete with tools.

Our new Case-Pallet guide is now available online. There are three guides for our regular, large and extra-large cases. It's a great way to shop for your best case-pallet configuration.
