## Description

The AF4515T5 Edge series handheld microscope features a high magnification of 500x - 550x, improved optics for sharper images, and Automatic Magnification Reading (AMR) for easy measurement.

The new modular wireless-ready design allows for USB connection or a quick swap to wireless with a WF-20 adapter (sold separately) making it a completely cordless and portable microscope. Using the included software, the AF4515T5 can detect and display the magnification, and store it with the captured picture automatically, making it especially useful for applications when reading the magnification is not feasible or difficult. AMR also brings more accuracy by eliminating the process of visually reading the magnification, while keeping the possibility to be further calibrated in the included software.

FLC LED Control gives you brightness adjustment and command of the LED on/off toggle options.

This model is wireless-ready but requires the WF-20 adapter for wireless functionality.
