Description

Designed for Dino-Lite: Articulating desktop stand with black holster and black base designed for use with the Dino-Lite handheld digital microscope cameras. The Dino-Lite handheld microscope (not included) slides directly into a holster which is mounted onto a peg connected to the articulating arm. The 16" long articulating arm can be moved into your desired height and angle for very versatile viewing.

Due to the flexible nature and movement of this entry level stand, it is not recommended for professional use, constant magnification adjustment, or high magnification applications. For adjustable angled viewing and more stability, see the [MS33A](#) or [RK-06A](#)

Additional Information
