a) Respirable airborne particles.

Engineering Controls

Ventilation

Keep airborne concentrations below the occupational exposure limits (OEL).

Because the aluminum oxide, aluminium metal compounds, as well as the carbon black are inextricably bound to the adhesive mixture, they are not available as airborne hazards under normal use. Ensure adequate ventilation if the product is mechanically misted or aerosolized.

Personal Protective Equipment

Eye protection

Wear appropriate protective eyeglasses or chemical safety goggles.

RECOMMENDATION: Ensure that glasses have side shields for lateral protection.

Skin Protection

For likely contacts, use of protective butyl rubber, neoprene, or other chemically resistant gloves.

For incidental contacts, use nitrile, latex, neoprenee or other chemically resistant gloves.

Section continued on the next page

Respiratory Protection

If exposed to fumes or dust above the exposure limit, wear a suitable respirator meeting local, regional, and national guidelines.

If the product is heated or worker has a known allergic reaction, consider using a full mask with organic vapor cartridge or with an independent air supply.

RECOMMENDATION: Consult your local safety supply store to ensure that your respirator has a NIOSH (U.S.) approved filter cartridges appropriate for the ingredients listed in Section 3. The respirator should be fitted to the employee by a professional. Ensure vapor cartridges are stored in sealed plastic bags when not being used.

General Hygiene Considerations

Wash hands thoroughly with water and soap after handling.

Section 10: Stability and Reactivity

Reactivity	Reacts exothermically with amines.
Chemical Stability	Chemically stable at normal temperatures and pressures.
Conditions to Avoid	Avoid ignition sources, open flames, and incompatible substances. Do not use in away that forms mist or aerosolizes the product.
Incompatibilities	Avoid strong oxidizing agents, strong acids, strong bases, ammonia, ethylene oxides, and halogenated compounds.

a) As respirable airborne particles.

Engineering Controls

Ventilation

Keep airborne concentrations below the occupational exposure limits (OEL).

Note that the aluminum oxide and carbon black powders are inextricably bound to the adhesive mixture; therefore, they are not available as airborne hazard under normal or foreseeable condition of use.

Personal Protective Equipment

Eye protection

Wear appropriate protective eyeglasses or chemical safety goggles.

RECOMMENDATION: Use safety glasses with lateral protection (side shields).

Skin Protection

For likely contacts, use of protective butyl rubber, neoprene, or other chemically resistant gloves.

For incidental contacts, use nitrile or other chemically resistant gloves.

Section continued on the next page

Respiratory Protection

For over-exposures up to 10 x OEL of mist/vapors/spray, wear respirator such as a half-mask respirator with organic vapor cartridges. Dust particulate filters are not required.

Above 10 x OEL, use a positive-pressure, air-supplied respirator or a self-contained breathing apparatus.

If the product is heated or worker has a known allergic reaction, consider using a full mask with organic vapor cartridge or with an independent air supply.

RECOMMENDATION: Consult your local safety supply store to ensure that your respirator has a NIOSH (U.S.) approved filter cartridges appropriate for the ingredients listed in Section 3. The respirator should be fitted to the employee by a professional. Ensure vapor cartridges are stored in sealed plastic bags when not being used.

General Hygiene Considerations

Wash hands thoroughly with water and soap after handling.

Section 11: Toxicological Information

Summary of Effects and Symptoms by Routes of Exposure

Eyes	Cause eye redness, pain, or eye damages.

Ingestion	Low toxicity: May cause abdominal pain, diarrhoea, drowsiness, nausea, and vomiting.
Chronic	Prolonged and repeated exposure to uncured epoxy hardener may lead to skin sensitization.

Other Toxicological Effects

Skin corrosion/irritation	Methyleneoxide, polymer with benzenamine, hydrogenated, 3-aminopropyldimethylamine, 4,4'-methylenebis(cyclohexylamine) causes severe skin burns.
Serious eye damage/irritation	Methyleneoxide, polymer with benzenamine, hydrogenated, 3-aminopropyldimethylamine, 4,4'-methylenebis(cyclohexylamine) and poly(oxy-1,2-ethanediyl), a-phosphono-w-methoxy-causes severe eye damage.
