

Need to see it? Simply spin it.

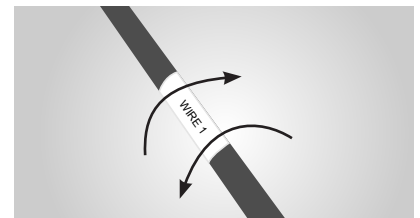

Rotating Vinyl Wire Labels (B-427)

Knowing your network should be as easy as reading a label. But, with stationary labels you may be fighting your wires and cables to read your labels. If you need to see the label, simply spin it with the B-427 Rotating Vinyl Wire Labels. They feature a straightforward application that allows you to **rotate the label on the wire so you can prevent damage to your Cat 5 / 6 and fiber optic cables and read them at any angle**. Unlike competitive options, these labels don't leave any adhesive residue or anchors on the wire so your labels spin freely from the start.

With these labels, you'll also see:

- **Time savings** by applying labels to wires that are already part of a closed connection
- **More space** for identification with the largest print area available in the market

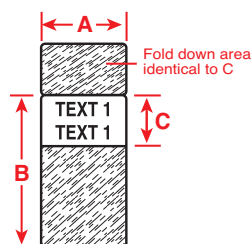

See the rotation

Move the label freely — independent from the wire.

Don't believe it? Check out the video on [BradyID.com](https://bradyid.com)!

Rotate it!

These materials work through a number of printer platforms.
