## ENA Network Analyzer (E5071C)

### Additional software options

#### Option TDR Enhanced time domain analysis

Option TDR enables the ENA to view reflection and transmission responses in the time domain using a simple and intuitive graphical user interface. Use time domain to tune filters, gate out the response of fixtures and cables, characterize the impedance of transmission lines, and more.

#### Option 010 Time domain analysis

Option 010 enables the ENA to view reflection and transmission responses in the time domain. Use time domain to tune filters, gate out the response of fixtures and cables, characterize the impedance of transmission lines, and more.

#### Option 008 Frequency offset mode

Option 008 enables the ENA to set the receiver frequencies independently from where the source frequency is tuned. This ability is important for harmonic distortion measurements and for measuring frequency converting devices such as mixers and converters. Advanced calibration techniques for the ENA, such as scalar mixer calibration (SMC) or vector mixer calibration (VMC), require this option.

#### Option 790 Measurement Wizard Assistant

Option 790 provides a simple measurement procedure setup for the 4-port ENA with a multiport test set such as the E5092A. The software delivers an easy-to-use measurement wizard programs including a calibration wizard setup<sup>1</sup>, which reduces operation time for complicated, time-consuming multiport measurements.

### Time base options

#### Option UNQ Standard stability time base

Option UNQ provides following stability:  
CW accuracy:  $\pm 5$  ppm (specification)  
Source stability:  $\pm 5$  ppm (5 °C to 40 °C typical)

#### Option 1E5 High stability time base

Option 1E5 provides the following stability:  
CW accuracy:  $\pm 1$  ppm (specification)  
Source stability:  $\pm 0.05$  ppm (5 °C to 40 °C typical),  
 $\pm 0.5$  ppm/year

### Hard disk drive options

#### Option 019 Standard hard disk drive

Option 019 provides a fixed hard disk drive. The removable disk drive is not available.

#### Option 017 Removable hard disk drive

Option 017 provides a removable hard disk drive. You can remove or replace the hard disk drive for secure area operations. If a spare disk is needed, order E5071CU-018 or E5071CU-028 hard disk drive kit.

### Certification options

#### Option 1A7 ISO 17025 compliant calibration

Option 1A7 provides a complete set of measurements which test the unit to manufacturer's published specifications. Includes calibration label, ISO 17025 calibration certificate, and data report, and measurement uncertainties and guardbands on all customer specifications. Conforms to ISO 17025 and ISO 9001.

#### Option A6J ANSI Z540 compliant calibration

Option A6J provides a complete set of measurements which test the unit to manufacturer's published specifications. Includes pre- and post-adjustment data and measurement uncertainty information compliant with the ANSI/NCSL Z540 standard.

1. When using an ECal module with MWA calibration wizard, a 4-port ECal module (i.e. N4431B, N4433A) is required.

## Measurement Accessories

A complete list of RF and microwave test accessories is available on our Web site:

[www.agilent.com/find/accessories](http://www.agilent.com/find/accessories)

Accessories are available with the following connector types: 50  $\Omega$  Type-N, 3.5 mm, 7 mm, 2.4 mm, 2.92 mm, 1.85 mm, 1.0 mm and waveguide.

Test port cables and a calibration kit/ECal module should be added for a complete measurement system.

### Calibration kits

#### Coaxial measurements

Mechanical calibration kits include standards, such as opens, shorts and loads, which are measured by the network analyzer for increased measurement accuracy.

Electronic calibration (ECal) kits replace mechanical calibration standards with one solid-state calibration module that is controlled by the network analyzer via USB. ECal kits provide many different impedances to the test ports which enables a full two-port calibration to be performed quickly with a single connection. This technique reduces operator errors and connector wear and abrasion.

Choose a calibration kit for each connector type to be used.

**Economy**, includes:

- open standards (male and female)
- short standards (male and female)
- fixed-termination standards (male and female)

**Standard**, includes the devices in the economy kit and adds:

- sliding load standards<sup>1</sup> (male and female) or a series of offset shorts

**Precision**, includes the devices in the economy kit and adds:

- 50  $\Omega$  airline(s) for TRL calibration
- TRL adapters

#### Waveguide measurements

For waveguide measurements, Agilent offers mechanical calibration kits that include:

- waveguide-to-coax adapters (X, P, K, R, Q, U, and V bands)
- precision waveguide section
- flush short circuit
- fixed terminations<sup>2</sup>
- straight section

#### Cables and adapter sets

Agilent offers the following types of cables:

- single cables: semi-rigid or flexible
- cable sets: semi-rigid or flexible

There are also adapter sets that protect the test port and convert the port to the desired connector interface. These kits contain:

- one male adapter
- one female adapter

To attain the best mechanical rigidity for device connection, use a single cable and the appropriate special adapter set. To attain the greatest flexibility for device connection, use a cable set.

---

1. A sliding load is not supported by the ENA.  
2. An offset load is not supported by the ENA.
