

**FLUKE**®

## Distributor Multimeter Basics online course

Fluke is proud to announce the introduction of a new 2-hour on-line multimeter training program available to end users for \$75.

The Basic Metering Course is an introduction in using the basic functions of the multimeter, safely and effectively. This includes multimeter components, measurement symbols and procedures, advanced modes, accessories, multimeter types and specifications, and maintenance. The content is not model-specific, but applicable to most general-purpose multimeters.

This course is presented in a narrated, slide-based format, enhanced with photographs, video demonstrations and interactive activities. Each lesson has its own learning objectives and periodically challenges the participant throughout the course.

Upon completion, a scored final exam will administered. Passing scores earn a Certificate of Completion, which may be accepted by some employers as evidence of basic multimeter training.

Note that this course requires prerequisite knowledge in basic electrical principles and measurement safety requirements.
