DAQ-STAQ Multiplexer Interface Cable

Highlights

Each new 1586-2588 DAQ-STAQ Multiplexer ships with its own interface cable. This spare interface cable is over 6 ft long (200 cm), same as the standard cable. When the rear panel of the 1586A Super-DAQ Precision Temperature Scanner is configured for use with the external DAQ-STAQ Multiplexer, the 1586-2588-CBL interface cable is used to connect the multiplexer with the DAQ-STAQ.
