HAKKO

DESOLDERING TOOL

FR-410

Instruction Manual

(HAKKO FR-4103)

●

Thank you for purchasing the HAKKO FR-410 Desoldering Tool.
This product is a desoldering tool that uses the quick–change mechanism.
Please read this manual before operating the HAKKO FR-410.
Keep this manual readily accessible for reference.

●

Table of Contents

1. PACKING LIST AND PART NAMES

HAKKO FR-410 station 1
HAKKO FR-4103 handpiece
(with N61-05 (ø1.0 mm [0.04 in] type S) nozzle) ... 1
Power cord 1

HAKKO FH-410 iron holder
 (with cleaning sponge) 1
Tool box 1
Instruction Manual 1

Nozzle (N61 series)
Filter pipe
Trigger
HAKKO FR-4103   Power cord   HAKKO FR-410   HAKKO FH-410
Tool box

×1
Cleaning Pin (for ø1.0 mm [0.04 in] nozzle)

×1
Cleaning Drill (for ø1.0 mm [0.04 in] nozzle)
×4
Ceramic paper Filter (for handpiece)

×2
Filter (for station)

×1
Cleaning Pin (for heating element)

×1
Nozzle wrench

2. SPECIFICATIONS

● HAKKO FR-410

Power consumption	190 W
Temperature range	330 - 450°C (620 - 850°F)
Temperature stability	±5°C (±9°F) at idle temperature

● Station

Output	AC 24 V
Vacuum generator	Vacuum pump, double cylinder type
Vacuum pressure (max.)	80 kPa (600 mmHg)
Suction flow	15 L/min.
Dimensions	165 (W) × 137 (H) × 244 (D) mm (6.5 × 5.4 × 9.6 in.)
Weight	4.8 kg (10.6 lb.)

● Handpiece (HAKKO FR-4103)

Part name	HAKKO FR-4103
Power consumption	140 W (24 V)
Nozzle to ground resistance	<2 Ω
Nozzle to ground potential	<2 mV
Cord	1.2 m (4 ft.)
Length (w/o cord)	168 mm (6.6 in.) with N61-05 nozzle
Weight (w/o cord)	190 g (0.42 lb.) with N61-05 nozzle

* The temperature was measured using the HAKKO FG-101 Soldering Tester.
* This product is protected against electrostatic discharge.
* Specifications and design are subject to change without notice.

⚠ CAUTION

■ Electrostatic Protection

This product includes such features as electrically conductive plastic parts and grounding of the handpiece and station as measures to protect the device to be soldered from the effects of static electricity. Be sure to observe the following instructions:
1. The handle and other plastic parts are not insulators, they are conductors. When replacing parts or repairing, take sufficient care not to expose live electrical parts or damage insulation materials.
2. Be sure to ground the unit during use.

3. WARNINGS, CAUTIONS AND NOTES

Warnings, cautions and notes are placed at critical points in this manual to direct the operator's attention to significant items. They are defined as follows:

⚠ WARNING : Failure to comply with a WARNING may result in serious injury or death.

⚠ CAUTION : Failure to comply with a CAUTION may result in injury to the operator, or damage to the items involved.

NOTE : A NOTE indicates a procedure or point that is important to the process being described.

⚠ WARNING

When power is ON, the nozzle will be hot. To avoid injury or damage to personnel and items in the work area, observe the following:

● Do not touch the nozzle or the metal parts near the nozzle.
● Do not allow the nozzle to come close to, or touch, flammable materials.
● Inform others in the area that the unit is hot and should not be touched.
● Turn the power off when not in use, or left unattended.
● Turn the power off when changing parts or storing the HAKKO FR-410.
● This unit is for counter or workbench use only.
● This appliance can be used by children aged from 8 years and above and persons with reduced physical, sensory or mental capabilities or lack of experience and knowledge if they have been given supervision or instruction concerning use of the appliance in safe way and understand the hazards involved.
● Children shall not play with the appliance.
● Cleaning and user maintenance shall not be made by children without supervision.

To prevent accidents or damage to the HAKKO FR-410, be sure to observe the following:

⚠ CAUTION

● Do not use the unit for applications other than desoldering.
● Do not strike the handpiece against hard objects to remove excess solder. This will damage the handpiece.
● Do not modify the HAKKO FR-410.
● Use only genuine HAKKO replacement parts.
● Do not allow the HAKKO FR-410 to become wet, or use it when hands are wet.
● Be sure to hold the plug when inserting or removing the handpiece and power cords.
● Be sure the work area is well ventilated. Desoldering produces smoke.
● While using the HAKKO FR-410, don't do anything which may cause bodily harm or physical damage.

4. INITIAL SETUP

A. Iron holder

Loosen the adjusting screws to change the angle of the handpiece receptacle as you like, then tighten the screws.

⚠ CAUTION
Increasing the angle of the handpiece receptacle will cause an increase in the handpiece temperature.

● Setup the iron holder
Following the instructions given in the illustration on the right, assemble the iron holder.

NOTE :
You can put nozzles that are not in use on the radial tray of the cleaner base.

Cleaner base

Radial tray

Cleaning sponge

(Large)

(Small)

● How to use the cleaning sponge
The sponge is compressed. It will swell when moistened with water. Before using the unit, dampen the sponge with water and squeeze it to remove excess water.

1. Fit the small sponge pieces into the hollows in the cleaner base.
2. Add an appropriate amount of water into the cleaner base. The small sponge pieces will absorb water and help keep the larger sponge damp at all times.
3. Dampen the large sponge, squeeze it to remove excess water and put it on the cleaner base.

⚠ CAUTION
Be sure the sponge is moistened with water before use to avoid damaging the nozzle.
B. Station

● Connection

1. Connect the power cord to the receptacle on the rear of the station.

2. Connect the plug from the HAKKO FR-4103 to the receptacle on the HAKKO FR-410.

⚠ **CAUTION**

Connect the plug to the receptacle, aligning the tab on the plug with the opening on the receptacle.
3. Set the HAKKO FR-4103 in the iron holder.

4. Connect the hose from the HAKKO FR-4103 to the vacuum outlet cap on the HAKKO FR-410 station.

5. Plug the power cord into a grounded power outlet. Ensure that the power switch is OFF before plugging in the power cord.

⚠ **CAUTION**

Be sure to ground this product as it is ESD safe by design.
6. Turn the power switch ON.

⚠ **CAUTION**

When not in use, place the handpiece in the iron holder.

Insert the plug into the receptacle until it seats.   Receptacle

To disconnect, pull the plug from the receptacle while pressing down the tab on the plug.

Connect the hose.

Turn the power switch ON.

5. OPERATION

PART NAMES

Control Buttons

Clogging Indicator ►

Normal display screen

°F

The HAKKO FR-410 has three controls

UP   - Moving the cursor UP. Increases the value.
DOWN - Moving the cursor DOWN. Decreases the value.
ENTER- End of sequence (terminates a phase of a data entry mode).

4

A. Desoldering

> **⚠ CAUTION**
> If the pump does not operate, immediately clean the nozzle & heating element and replace the filter if necessary.

1. Place the nozzle over the lead wire of the part to be desoldered and begin heating.

   Be careful to heat the lead wire and the solder, not the land. Placing the nozzle directly in contact with the land may cause the land to peel off. You may apply a small amount of solder to form a heat bridge to help the heating process.

2. Check to make sure all of the solder on the joint has melted.

   With the nozzle still in place over the lead wire, slowly move the lead wire, being careful not to apply too much force. If the lead wire moves easily, all of the solder has melted.

3. Pull the trigger to remove the melted solder.

> **⚠ CAUTION**
> Make sure that a filter has been inserted in the desoldering tool. Desoldering without a filter may damage the pump.

4. If the solder was not removed, re-solder the part using new solder and then repeat the desoldering process.
● **When triggering before the heater reaches set temperature**

   When triggering before the heater reaches set temperature, the display screen shows "HEATING. . . PLEASE WAIT" and the vacuum does not work. Please wait for the heater to reach the set temperature.
```
    HEATING. . .
   PLEASE WAIT
```
B. Making Changes to Settings
● **Selecting the preset number**
   When changing the temperature, there is a preset function to manually set the temperature.

1. Press any of the three control buttons.

2. The preset selection screen appears.

```
▶PRESET1          660℉
 PRESET2          750℉
 PRESET3          840℉
<↑>        <↓>      <ENT>
```

3. Move the cursor UP or DOWN by pressing the corresponding buttons.

▸PRESET1	660℉
PRESET2	750℉
PRESET3	840℉
<↑>	<↓>	<ENT>

4. Press the <ENT> button to finalize your selection.

▸PRESET1	660℉
PRESET2	750℉
PRESET3	840℉
<↑>	<↓>	<ENT>

If you wish to exit the PRESET SELECTION screen...
Scroll the cursor to the bottom, select <EXIT>, and press the <ENT> button. You will return to the normal display without making any changes.
Or if the device is left alone without making any operation for 10 seconds, you will return to the normal display.

When changing the current set temperature or the preset temperature, follow the operation of "● Changing various setting (other than preset selections)".

● **Changing various settings (other than preset selections)**

The following settings can be changed from this screen:

1. Press and hold any one of the three control buttons for at least 2 seconds.
2. The setting selection screen appears.

| ▸Set Temp | 680°F |
OffsetTemp	OO°F
Vacuum Check	
<↑>	<↓>	<ENT>

• Set Temp (Nozzle temperature setting)
• Offset Temp (Nozzle temperature offset setting)
• Vacuum Check (Check of nozzle clogging and suction force)
• Preset Temp (Setting of each preset temperature)
• Preset ID (Setting of each preset name)
• LCD Contrast (Contrast adjustment of display screen)
<EXIT> (Return to the normal display)

3. Move the cursor UP or DOWN by pressing the corresponding buttons.

▸Set Temp	680°F
OffsetTemp	OO°F
Vacuum Check	
<↑>	<↓>	<ENT>

4. Press the <ENT> button to finalize your selection.

| ▸Set Temp | 680°F |
OffsetTemp	OO°F
Vacuum Check	
<↑>	<↓>	<ENT>

6

● **Set Temp** (Nozzle temperature setting)

⚠**CAUTION**
The temperature range is from 620 to 850°F. (330 to 450°C)
If you enter a value outside the temperature setting range, the display returns to
the hundreds digit, and you have to enter a correct value.

1. Move the cursor to select "Set Temp". After selecting, press <ENT>.

```
▶Set Temp    680°F
 OffsetTemp  OO°F
 Vacuum Check
 <↑>  <↓>   <ENT>
```

2. Entering from hundreds to units digit
   Press the < ↑ > or < ↓ > to set the desired figure.
   Press the <ENT> button to advance to the next digit.

   Only values from 6 to 8 can be selected when entering the hundreds digit.
   (In °C mode, values from 3 to 4 can be selected.)
   Values from 0 to 9 can be selected when entering the tens or units digits.
   (The same values can be selected in °C mode.)

3. When desired figure is displayed, press the button to enter.
   The next digit will begin to flash. After entering the units digit, press the button to
   save the figure to the system memory and begin heater control with new setting
   temperature.

⚠**CAUTION**
If power is switched off or lost during the execution of this procedure, no data
will be entered. The entire procedure must be repeated from step 1.

● **Offset Temp** (Nozzle temperature offset setting)

Example：If the measured temperature is 705℉ and set temperature is 700℉, the difference is -5℉. (need to decrease by 5℉) So, enter the figure which 5 is deducted from present offset value.

⚠**CAUTION**
The allowable ranges for offset values are from -90 to +90℉. (In℃ mode, from -50 to +50℃) If you enter a value outside the offset value range, the display returns to the hundreds digit, and you have to enter a correct value.

1. Move the cursor to select "OffsetTemp". After selecting, press <ENT>.

```
 S e t   T e m p     6 8 0°  F
▶O f f s e t T e m p   O O°  F
 V a c u u m   C h e c k
 < ↑ >    < ↓ >    < E N T >
```
2. Enter the offset value (-05) which is the difference between tip temperature and set temperature.
   Press the < ↑ > or < ↓ > to set the desired figure.
   Press the <ENT> button to advance to the next digit.

   The hundreds digit can display 0 (for positive value) or minus sign. (for negative value)
   (Same values can be selected in ℃ mode.)
   Values from 0 to 9 can be selected when entering the ten digit.
   (In ℃ mode, values from 0 to 5 can be selected.)
   Values from 0 to 9 can be selected when entering the units digit.
   (Same values can be selected in ℃ mode.)

3. After entering the units digit, press the button to save the figure to the system memory and begin heater control with the new offset value.
⚠**CAUTION**
During the offset setting, please be careful tip temperature does not exceed 850℉.

● **Vacuum Check** (Check of nozzle clogging and suction force)

During suction, the gauge indicating sucking status is shown at the lower side of the screen.

Suction gauge   Sign of clogging

When "CHK" appears and you notice that the sucking force is weakening, perform "Vacuum Check".

1. Move the cursor to select "Vacuum Check". After selecting, press <ENT>.

```
Set  Temp   680° F
OffsetTemp  OO° F
▶Vacuum Check
 <↑>  <↓>   <ENT>
```

2. Pull the trigger.
```
Vacuum Check
Pull  Trigger

             <EXIT>
```
3. When "Clogging" appears, perform cleaning and replace filters.

No degradation in sucking force

```
Vacuum Check
Pull  Trigger
      O  K
             <EXIT>
```

Degradation in sucking force

```
Vacuum Check
Pull  Trigger
   Clogging
             <EXIT>
```
4. Select <EXIT>, and press the <ENT> button to return to the selection screen.

● **Preset Temp** (Setting of each preset temperature)

⚠ **CAUTION**

The temperature range is from 620 to 850℉. (330 to 450℃)
If you enter a value outside the temperature setting range, the display returns to
the hundreds digit, and you have to enter a correct value.

---

1. Move the cursor to select "Preset Temp". After selecting, press <ENT>.
   Select the preset No. whose temperature setting you wish to change.

```
OffsetTemp OO°F
Vacuum Check
▶Preset Temp
<↑>  <↓>  <ENT>
```

➡

```
▶P1 Temp    660°F
 P2 Temp    750°F
 P3 Temp    840°F
<↑>  <↓>  <ENT>
```

2. Entering from hundreds to units digit
   Press the < ↑ > or < ↓ > to set the desired figure.
   Press the <ENT> button to advance to the next digit.

   Only values from 6 to 8 can be selected when entering the hundreds digit.
   (In ℃ mode, values from 3 to 4 can be selected.)
   Values from 0 to 9 can be selected when entering the tens or units digits.
   (The same values can be selected in ℃ mode.)

```
PRESET1   TempSet

        660°F
<↑>   <↓>   <ENT>
```

➡

```
PRESET1   TempSet

        660°F
<↑>   <↓>   <ENT>
```

➡

```
PRESET1   TempSet

        660°F
<↑>   <↓>   <ENT>
```

3. After entering the units digit, press the button to save the figure to the system
   memory and begin heater control with new setting temperature.

⚠ **CAUTION**

If power is switched off or lost during the execution of this procedure, no data
will be entered. The entire procedure must be repeated from step 1.

---

4. To exit from each setting screen, scroll the screen, select <EXIT>, and press the
   <ENT> button.

```
 P2 Temp    750°F
 P3 Temp    840°F
▶<EXIT>
<↑>  <↓>  <ENT>
```

10
● **Preset ID** (Setting of each preset name)

> ⚠ **CAUTION**
> As a preset ID, 1 to 8 characters can be used.
> Usable characters are "A - Z", "0 - 9", and space (" "). Entering a space makes your entry terminated. Any character(s) that follows the space is deleted.

1. Move the cursor to select "Preset ID". After selecting, press <ENT>.

```
┌────────────────────┐
│ Vacuum  Check      │
│ Preset  Temp       │
│▶Preset  ID         │
│ <↑>  <↓>   <ENT>   │
└────────────────────┘
```

2. Move up and down the cursor with the control buttons.
   After selecting, press <ENT>.

```
┌────────────────────┐
│▶P1  ID   PRESET1   │
│ P2  ID   PRESET2   │
│ P3  ID   PRESET3   │
│ <↑>  <↓>   <ENT>   │
└────────────────────┘
```

3. Press the < ↑ > or < ↓ > to set the desired figure.
   Press the <ENT> button to advance to the next digit.

```
┌────────────────────┐
│ P1  ID         SET │
│         ＼｜／       │
│        PRESET1     │
│ <↑＞  <↓>   <ENT>  │
└────────────────────┘
```

4. To exit from setting screen, scroll the screen, select <EXIT>, and press the <ENT> button.

```
┌────────────────────┐
│ P2  ID   PRESET2   │
│ P3  ID   PRESET3   │
│▶<EXIT>             │

└────────────────────┘
```

11

● **LCD Contrast** (Contrast adjustment of display screen)

To make the screen display easy to see, adjust contrast.

1. Move the cursor to select "LCD Contrast". After selecting, press <ENT>.

```
 Preset  Temp
 Preset  ID
▸LCD  Contrast
 <↑>  <↓>  <ENT>
```
2. Press the < ↑ > or < ↓ > to set the adjust contrast.
   (Selection range is 1 to 25.)

```
  LCD  Contrast
   Adjustment
        1O
 <↑>  <↓>  <ENT>
```

3. After selecting the value, press <ENT> to return to the selection screen.

To exit from each setting screen, scroll the screen, select <EXIT>, and press the <ENT> button.
```
 Preset  ID
 LCD  Contrast
▸<EXIT>
 <↑>  <↓>  <ENT>
```
6. PARAMETER SETTING

● PARAMETER SETTINGS

Press and hold any one of the three control buttons, and turn on the power switch to display the parameter setting screen. The following parameters can be set:

Parameter name	Value	Initial value
Temp Mode	℃ / ℉	℉*
ShutOff Set	OFF / ON	OFF
Timer**	30 to 60 min.	30 min.
Vacuum Mode	Normal / Timer	Normal
Vacuum Time***	1 to 5 sec.	1 sec.
Auto Sleep	OFF / ON	ON
Timer**	1 to 29 min.	6 min.
Sleep Temp	390 to 570℉ (200 to 300°C)	390℉ (200℃)
Low Temp	54 to 270℉ (30 to 150℃)	270℉ (150℃)
Error Alarm	ON / OFF	ON
Ready Alarm	ON / OFF	ON
Pass. Lock	ON (Lock / Partial) / OFF (Unlock)	OFF
Password****	**"ABCDEF"** Select three letters	-
Initial Reset	℃ / ℉ / Cancel	

Press and hold any one of the three control buttons while turning on the power switch.

① ②

*   For USA.

**   Timer can be set when ShutOff / Auto Sleep is set to "ON".

*** Vacuum Time is displayed when Vacuum Mode is set to "Timer".

****Password is displayed when Password Lock is set to "Lock" or "Partial".

● Temp Mode

Select the temperature mode from Celsius or Fahrenheit.

1. Move the cursor to select "Temp Mode".
   After selecting, press <ENT>.

```
▶Temp Mode      ˚F
 ShutOff Set  OFF
 VacuumMode   NOR
 <↑>  <↓>   <ENT>
```

2. ˚C and ˚F will be switched alternately
   if you press the < ↑ > or < ↓ > button.

3. Return to parameter setting display
   if you press the <ENT> button after
   setting.

```
   Temp  Mode  Set
         ˚C
         ˚F
 <↑>   <↓>   <ENT>
```
● ShutOff Set

Select whether you will activate the auto shutoff function. When the auto shutoff function is set to on and no operation is performed for constant time after the handpiece is set in the iron holder, the buzzer sounds three times and the auto shutoff function will be enabled.

1. Move the cursor to select "ShutOff Set".
   After selecting, press <ENT>.

```
 Temp  Mode      ˚F
▶ShutOff Set  OFF
 VacuumMode    NOR
 <↑>  <↓>    <ENT>
```

Select "OFF"

2. ON and OFF will be switched alternately
   if you press the < ↑ > or < ↓ > button.

```
   Shut  Off  Set
 Shut  Off      OFF
 Timer          30m
 <↑>   <↓>   <ENT>
```

3. Selecting "ON" allows you to make the
   setting for "Timer".
   (Default is 30 minutes.)

Select "ON"

4. When setting "Shut Off" to "ON",
   the area for "Timer" flashes.

```
   Shut  Off  Set
 Shut  Off       ON
 Timer          30m
 <↑>   <↓>   <ENT>
```

5. Press the < ↑ > or < ↓ > to set the desired
   figure.

6. Pressing the <ENT> button after this change
   makes the set time stored in the internal memory.

```
 Temp  Mode      ˚F
▶ShutOff Set   ON
 VacuumMode    NOR
 <↑>  <↓>    <ENT>
```

14
● **Vacuum Mode**

Select whether you manually operate the desoldering pump or use the timer function.

Normal：Solder is sucked only when you are pulling the trigger.
Timer：Even after you release the trigger, sucking continues for the specified period of time.
* Set time in "Vacuum Time".

1. Move the cursor to select "VacuumMode".
   After selecting, press <ENT>.

```
Temp  Mode        ° F
ShutOff  Set   OFF
▸VacuumMode     NOR
<↑>   <↓>   <ENT>
```

Select "Normal"

2. Normal and Timer will be switched alternately
   if you press the < ↑ > or < ↓ > button.

```
Vacuum Mode  Set

       Normal
       Timer
<↑>   <↓>   <ENT>
```

3. Return to parameter setting display
   if you press the <ENT> button after
   setting.

Select "Timer"

(Vacuum Time)

* When selecting "Timer"

"Vacuum Time" appears under "VacuumMode" in the parameter select screen.

● **Vacuum Time**

1. Move the cursor to select "Vacuum Time".
   After selecting, press <ENT>.

```
ShutOff  Set   OFF
VacuumMode   TIME
▸Vacuum  Time    1s
<↑>   <↓>   <ENT>
```

2. Press the < ↑ > or < ↓ > button, you can
   change to the desired value.

```
Vacuum  Time  Set

       01sec
<↑>   <↓>   <ENT>
```

3. Return to parameter setting display
   if you press the <ENT> button after
   setting.
● **Auto Sleep**

Select whether you will activate the auto sleep function. When the auto sleep function is set to on and no operation is performed for constant time after the handpiece is set in the iron holder, the auto sleep function will be enabled and the temperature of the handpiece declines to the controlled degree.

* The auto sleep temperature can be set in "Sleep Temp".

1. Move the cursor to select "Auto Sleep". After selecting, press <ENT>.

```
ShutOff Set OFF
VacuumMode    NOR
▶Auto Sleep   OFF
 <↑>  <↓>  <ENT>
```

2. ON and OFF will be switched alternately if you press the < ↑ > or < ↓ > button.

Select "OFF"

```
Auto Sleep Set
Auto Sleep    OFF
Timer         06m
 <↑>  <↓>  <ENT>
```

3. Selecting "ON" allows you to make the setting for "Timer". (Default is 6 minutes.)

Select "ON"

* When selecting "ON"

4. When setting "Auto Sleep" to "ON", the area for Timer flashes.

```
Auto Sleep Set
Auto Sleep     ON
Timer         06m
 <↑>  <↓>  <ENT>
```

5. Press the < ↑ > or < ↓ > button, you can change to the desired value.

```
ShutOff Set OFF
VacuumMode    NOR
▶Auto Sleep   06m
 <↑>  <↓>  <ENT>
```

6. Pressing the <ENT> button after this change makes the set time stored in the internal memory.

16

● **Sleep Temp**

Set the auto sleep temperature.

1. Move the cursor to select "SleepTemp".
   After selecting, press <ENT>.

2. Entering from hundreds to units digit.
   Press the < ↑ > or < ↓ > to set the desired
   figure.
   Press the <ENT> button to advance to the
   next digit.

   Only values from 3 to 5 can be selected when
   entering the hundreds digit.
   (In °C mode, values from 2 to 3 can be
   selected.)
   Values from 0 to 9 can be selected when
   entering the tens or units digits.
   (The same values can be selected in °C mode.)

3. After entering the units digit, press the button
   to save the figure to the system memory.

```
VacuumMode   NOR
Auto Sleep   06m
▶SleepTemp 390°F
<↑>  <↓>  <ENT>
```

```
Sleep Temp Set

       390°F
<↑>  <↓>  <ENT>
```

● **Low Temp**

When the temperature drops below a set limit, an error is displayed and the buzzer
sounds.

1. Move the cursor to select "Low Temp".
   After selecting, press <ENT>.

2. Entering from hundreds to units digit.
   Press the < ↑ > or < ↓ > to set the desired
   figure.
   Press the <ENT> button to advance to the
   next digit.

   Only values from 0 to 2 can be selected when
   entering the hundreds digit.
   (In °C mode, values from 0 to 1 can be
   selected.)
   Values from 0 to 9 can be selected when
   entering the tens or units digits.
   (The same values can be selected in °C mode.)

3. After entering the units digit, press the button
   to save the figure to the system memory.

```
Auto Sleep   06m
SleepTemp 390°F
▶Low Temp  270°F
<↑>  <↓>  <ENT>
```

```
Low Temp Set

       270°F
<↑>  <↓>  <ENT>
```

17

● **Error Alarm**

In the buzzer sound setting mode, which sets whether to sound the buzzer when a error occurs.

1. Move the cursor to select "Error Alarm". After selecting, press <ENT>.

```
Sleep Temp  390°F
Low  Temp   270°F
▶Error Alarm   ON
<↑>  <↓>   <ENT>
```

2. ON and OFF will be switched alternately if you press the < ↑ > or < ↓ > button.

```
Error Alarm Set
       O N
       OFF
<↑>  <↓>   <ENT>
```

3. Return to parameter setting display if you press the <ENT> button after setting.
● **Ready Alarm**

When the set temperature alert setting mode is on, the buzzer sounds if you reached the usable temperature.

1. Move the cursor to select "Ready Alarm". After selecting, press <ENT>.

```
Low  Temp   270°F
Error Alarm  OFF
▶Ready Alarm   ON
<↑>  <↓>   <ENT>
```

2. ON and OFF will be switched alternately if you press the < ↑ > or < ↓ > button.

```
Ready Alarm Set
       O N
       OFF
<↑>  <↓>   <ENT>
```

3. Return to parameter setting display if you press the <ENT> button after setting.
● **Pass. Lock**

Set a password and use this function to restrict the following changes.

⚠ **CAUTION**
The correct password must be entered to make the change.

Lock   : All setting changes require a password entry.
Partial   : Select whether or not to enter your password for set temperature/preset selection/
              offset temperature change. Other procedures require password entry.
Unlock : Any setting change does not require
              a password entry.

1. Move the cursor to select "Pass. Lock".
   After selecting, press <ENT>.

2. Using the < ↑ > or < ↓ > button, select an
   option from Lock, Partial, and Unlock.

```
Error Alarm  OFF
Ready Alarm  OFF
▸Pass. Lock   OFF
<↑>  <↓>  <ENT>
```

Select
"Unlock"

```
PasswordLock Set

       Unlock
<↑>  <↓>  <ENT>
```

* When selecting "Partial" or "Lock"

3. Select Lock ON/OFF for set temperature/
   preset selection/offset temperature change.
   (Only when selecting Partial)

4. After making all selections, using the < ↑ >
   or < ↓ > button, select an option from OK or
   Cancel. (Only when selecting Partial)

5. Press the <ENT> button.
   (Only when selecting Partial)

6. Using the < ↑ > or < ↓ > button, enter a
   password. (Selection of three characters
   from ABCDEF)

7. After entering, press the <ENT> button.
   Select OK or Cancel using the < ↑ > or
   < ↓ > button.

8. After setting the password, press the <ENT>
   button to return to the parameter setting screen.

* When selecting "OK"

    The password is shown under "Pass. Lock" on
    the parameter selection screen.

Select   Select
"Lock"   "Partial"

```
Set Temp      ON
Preset Sel    ON
Offset Temp   ON
<↑>  <↓>  <ENT>
```

```
Preset Sel    ON
Offset Temp   ON
       OK
<↑>  <↓>  <ENT>
```

```
Password Set
       ***
       OK
<↑>  <↓>  <ENT>
```

```
Pass.Lock     ON
Password
▸Initial Reset
<↑>  <↓>  <ENT>
```
● **Password**

The password can be changed.

1. Match ▶ to "Password" and press the <ENT> button.

```
Pass.Lock      ON
Password
▶Initial  Reset
<↑>   <↓>   <ENT>
```

2. Use the < ↑ > or < ↓ > button to enter the current password, and press the <ENT> button.

```
Input  Password
        A**

<↑>   <↓>   <ENT>
```

3. Enter a new password.
   (For a password, select 3 letters from among ABCDEF.)

```
Password  Set
        ***
        OK
<↑>   <↓>   <ENT>
```

4. After setting the password, press the <ENT> button. Using the < ↑ > or < ↓ > button, select either OK or Cancel.

```
Password  Set
        ***
        OK
<↑>   <↓>   <ENT>
```

5. Press the <ENT> button to return to the parameter selection screen.

```
Ready  Alarm   ON
Pass.Lock      ON
▶Password
<↑>   <↓>   <ENT>
```

● **Initial Reset**

Initial Reset allows the factory default settings to be restored.

1. Move the cursor to select "Initial Reset". After selecting, press <ENT>.

```
Ready  Alarm  OFF
Pass.  Lock    OFF
▸Initial  Reset
<↑>   <↓>   <ENT>
```

2. Using the <↑> or <↓> button, select either °C or °F. To stop "Initial Reset", scroll the screen to select <EXIT>.

```
Initial  Reset
      °C
      °F
<↑>   <↓>   <ENT>
```

3. After selecting it, using the <↑> or <↓> button, select OK or Cancel.

```
Initial  Reset
      °F
      OK
<↑>   <↓>   <ENT>
```
⚠**CAUTION**
Even when Initial Reset is finished, "Pass. Lock" and password settings remain.

⚠**CAUTION**
To exit from the parameter setting display, scroll the screen, select <EXIT>, and press the <ENT> button.

```
Pass.  Lock    OFF
Initial  Reset
▸<EXIT>
<↑>   <↓>   <ENT>
```

7. MAINTENANCE

Properly maintained, the HAKKO FR-410 desoldering tool should provide years of good service. Efficient desoldering depends upon the temperature, solder/flux selection, and proper routine maintenance. Perform the following service procedures as dictated by the conditions of the station's usage.

⚠ WARNING
Since the desoldering tool can reach a very high temperature, please work carefully. Except when cleaning the nozzle and heating element, ALWAYS turn the power switch OFF and disconnect the power plug before performing any maintenance procedure.

During suction, the gauge indicating suction force is shown at the bottom of the screen.

If "CHK" appears on the display, check the nozzle and heater for restrictions.

If the nozzle or heater are clogged, clean or replace them.
Suction gauge   Sign of clogging

Replacing the filter pipe

Replace the filter pipe as shown following steps A to C. During operation, the filter pipe is very hot. Wait until the filter pipe is cool before replacing the filter or cleaning. We recommend keeping a second filter pipe containing new filters handy, and replacing the installed filter pipe with this secondary filter pipe.

C. Replace the entire filter pipe with a secondary filter pipe.

B. Automatically goes back

Release Knob

A. Lower the lock knob
⚠CAUTION
The section from the heating element to the filter pipe is provided with pipes through which melted solder passes, so it may become very hot. Be very careful when handling this section.

CAUTION : HOT AREA

22
Nozzle Maintenance

⚠CAUTION

The handpiece may be extremely hot. During maintenance, please work carefully.

1. Inspect and clean the nozzle

Turn the power switch ON and let the nozzle heat up.

⚠CAUTION
The cleaning pin will not pass through the nozzle until the solder inside the nozzle is completely melted.

● Clean out the hole of the nozzle with the nozzle cleaning pin.

● If the cleaning pin does not pass through the hole in the nozzle, clean with the cleaning drill.

● Check the condition of the solder plating on the nozzle tip.

⚠CAUTION
・If the cleaning drill is forced into the nozzle, the drill bit could break or be damaged.
・Please use the proper size cleaning pin or cleaning drill for the nozzle diameter.

● Check visually if the nozzle was eroded.

Cleaning with the nozzle cleaning pin

The cleaning pin passes completely through the hole.
Cleaning with the cleaning drill
● Before cleaning

Insert the bit while turning it clockwise.

● After cleaning

Pull the drill bit out straight without turning it.

Use the proper size cleaning pin or cleaning drill for the nozzle diameter.

Solder plating part

The solder plating is coming off. The nozzle hole is eroded.

The caliber has expanded due to erosion.

⚠ CAUTION
・Erosion may not be able to be confirmed visually, so replace it when it starts to work inefficiently.
・Special plating is applied to the inside and surface of the nozzle hole, but if it is exposed to high-temperature soldering for a long time, it may be eroded and temperature stability may not be maintained.

* If the nozzle is still in a good condition, put some fresh solder on the nozzle tip to protect solder plated area from oxidation.
2. Disassemble the heating element.

Remove the enclosure pipe and the nozzle with the provided wrench.
⚠ **CAUTION**

The heating element is very hot during operation.

Heating Element   Nozzle   Enclosure pipe

The enclosure pipe is held to the nozzle changing tool by pressing this part from both sides. (The nozzle is not held to the nozzle changing tool. Be careful when removing them.)

3. Clean out the tube in the heating element with the provided cleaning pin.

● Turn the power off after cleaning.

Scrape away all oxidation from the tube in the heating element until the cleaning pin passes cleanly through the tube.

⚠ **CAUTION**

・Be sure the solder in the tube in the heating element is completely heated, before cleaning the tube.
・If the cleaning pin does not pass through the tube in the heating element, replace the heating element.

Replacing the filters

● Handpiece filter

1. Turn the power switch OFF.
2. When the filter pipe is cool to the touch, push down on the release knob at the back of the handpiece and remove the filter pipe.

⚠ **CAUTION**

The filter pipe is very hot.

3. Examine the seals (front and filter holders) at each end of the filter pipe.
   Replace : Stiff and/or cracked.
4. Examine the Pre-filter: Remove solder adhering to the waste collector.
5. Examine the ceramic paper filter.
   Replace : Ceramic paper filter is showing signs of stains from flux, is stiff, or contains any solder.

Front holder   Filter holder

FRONT

Filter pipe   Pre-filter

Ceramic paper filter
● Station filter

If the filer is showing signs of stains from flux or is stiff, replace it.
Attach the filter as shown in the right diagram.

Filter

Vacuum outlet cap   Vacuum outlet cap (with Filter)

24
Replacing the heating element (heating core)

⚠ **CAUTION**

Except the case especially indicated, always turn the power switch OFF and disconnect the power plug before performing any maintenance procedure.
● **Disassemble the heating element.**

1. Remove the nozzle and enclosure pipe.

Nozzle wrench

Heating Element

Enclosure pipe
Nozzle

Remove the enclosure pipe and the nozzle with the attached wrench.

2. Remove the 2 screws fixing the joint cover and remove the joint cover.
3. Remove the screw from the handpiece and disconnect the heating element.

Heating Element

Joint cover

4. Replace the heating element. Assemble using the same procedure in reverse.

* Caution of the heating element installation

The installation / disassembly with the quick changer smoothens. Please attach it to have the groove of the movable joint and the guide hole of the joint cover coming at the same position (see figure below).

Guide hole (×3)

Guide hole (×3)

Groove (×3)

Joint cover

Movable joint

Groove (×3)
⚠ **CAUTION**

Be sure to change the offset value (temperature adjustment) of the nozzle temperature after replacing the heating element. Failure to do this may result in a heater temperature that is much higher or lower than the previous one.

Maintenance of the pump head

● Remove the cover
When performing maintenance on the pump head, remove the screws holding the cover and take the cover off.

Pump head

● Cleaning the pump head
1. Remove the valve and valve guard and remove any attached flux.

⚠ **CAUTION**
· When the valve guard is difficult to remove, please warm it with hot air. Please do not try to forcibly remove it with a screwdriver, etc. If the valve guard becomes deformed, it will no longer be airtight.
· Please clean with either alcohol or thinner.

Pump head disassembly
*It is resting on its side.
 Clean the pump head, valve and valve guard.

Pump head

Valve

Valve guard

Pump head

Valve guard

Valve

*Please replace the valve if it is deformed or hardened.

2. Install the valve and valve guard.

⚠ **CAUTION**
When assembling the pump, please make sure to keep it airtight so that there are no air leaks.

26
8. CHECKING PROCEDURE

⚠ WARNING
Unless otherwise directed, carry out these procedures with the power switch OFF and the power UNPLUGGED.

■ **Check for a broken heater or sensor**
1. Check for a broken heater or sensor
Measure the resistance across this position.

Verify the electrical integrity of the heater and sensor.
Measure the resistance of the heater and sensor while at room temperature（15 to 25℃ ; 59 to 77℉）. It should be 3.9 Ω ±10%. If the resistance exceeds these limits, replace the tip.

■ **Replacing the fuse**

1. Unplug the power cord from the power receptacle.
2. Remove the fuse holder.
3. Replace the fuse.
4. Put the fuse holder back in place.

■ Checking the connection cord for breakage

Checking the connection cord for breakage

1. Unplug the connection cord from the station.

2. Disassemble the heating element. (Please refer to "Replacing the heating element (heating core)")

3. Measure the resistance values between the connector and the lead wires at the socket as follows. (Please refer to the wiring diagram on the left.)

Pin1 · · · · · · Red {Heating element1 (+)} ①
Pin2 · · · · · · Purple {Trigger (+)} ②
Pin4 · · · · · · Black 〔Heating element1 (-)〕 ③
Pin8 · · · · · · Blue and White {Trigger (-)} ④
Pin9 · · · · · · Yellow {Heating element2 (+)} ⑤
Pin12 · · · · · Brown {Heating element2 (-)} ⑥
Pin13 · · · · · Green (Grounding line) ⑦*

If any value exceeds 0 Ω or is ∞, replace the connection cord.

* For information on the plug 13, refer to "■ Checking the grounding line".

■ Checking the grounding line

1. Measure the resistance value between Pin 13 and the nozzle.
2. If the value exceeds 2 Ω (at room temperature), perform the nozzle maintenance. If the value still does not decrease, check the connection cord for breakage.

28

9. ERROR MESSAGE

● **Sensor Error**

When there is the possibility that a failure has occurred in the sensor or heater (including the sensor circuit), "**Sensor Error**" is displayed and the power is shut down.

● **Grip Error**

"**Grip Error**" will be displayed if the connector cord is not attached to the station OR the wrong handpiece is connected.

● **Low Temp Error**

If the sensor temperature falls below the difference between the current temperature setting and the low-temperature alarm tolerance, "**Low Temp Error**" is displayed and the warning buzzer sounds. When the nozzle temperature rises to a value within the set tolerance, the buzzer will stop sounding.

EXAMPLE:

350°C (400°C - 50°C)

Set temperature
Low-temperature alarm tolerance

OR

650°F (750°F - 100°F)

Set temperature
Low-temperature alarm tolerance
> **EXAMPLE:**
> Assume that the temperature setting is 400°C/750°F and the tolerance 50°C/100°F. If the temperature continues to decrease and finally falls below the value indicated while the heating element is on, "Low Temp Error" is displayed.

● **Heater Short Error**

"**Heater Short Error**" will flash, and the buzzer will sound continuously, when an incompatible heater circuit is inserted, or if a foreign object has found it's way into the connector.

● **FATAL Error**

This is displayed when the system is unable to operate normally. Should this error be displayed, please contact your HAKKO representative.

10. TROUBLE SHOOTING GUIDE

⚠ WARNING
Before checking the inside of the HAKKO FR-410 or replacing parts, be sure to disconnect the power plug. Failure to do so may result in electric shock.

● **Display does not turn on.**

CHECK : Is the power supply cable or connection plug disconnected?
ACTION : Connect it tightly.
CHECK : Is the fuse blown?
ACTION : Replace the fuse. If the fuse blows again, please send the entire product back to us for repair.

● **Pump does not operate.**

CHECK : Is the power supply cable or connection plug disconnected?
ACTION : Connect it tightly.
CHECK : Is the nozzle or hole in the heating element clogged?
ACTION : Clean it.

● **Solder is not being absorbed.**

CHECK : Is the filter pipe full of solder?
ACTION : Clean it.
CHECK : Is the ceramic paper Filter hardened?
ACTION : Replace it with a new one.
CHECK : Is there a vacuum leak?
ACTION : Check the connections and filter pipe seals and replace any worn parts.
CHECK : Is the heater tube or nozzle clogged?
ACTION : Clean it.

● **The nozzle does not heat up.**

CHECK : Is the desoldering gun cord assembly properly connected?
ACTION : Connect it tightly.
CHECK : Is the heating element damaged?
ACTION : Replace it with a new one.

| **NOTE :** |
|---|
| When repairs are needed, please send both the handpiece and the station to your sales agent. |
