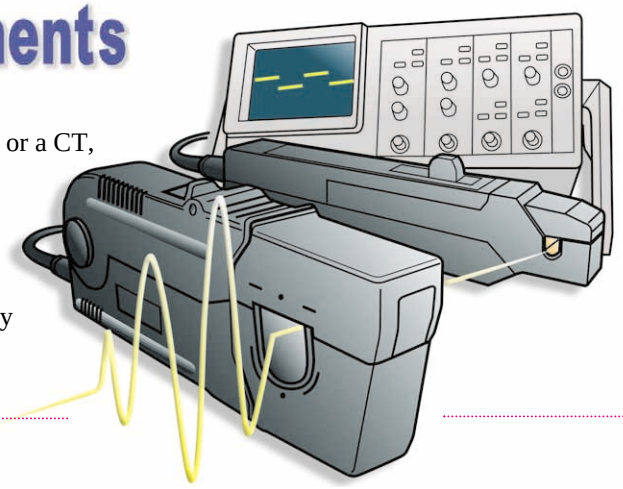
3273-50 to 3276 CLAMP ON PROBE

From High Sensitivity (High S/N Ratio) to Large Current Measurements

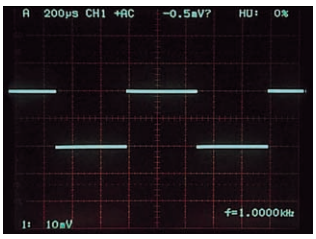


Because current measurement requires the insertion of a shunt or a CT, the task often becomes difficult due to breaks in the electrical path. The 3273-50 - 3276 CLAMP ON PROBEs only need to be connected directly into the BNC input on waveform observation equipment such as an oscilloscope or a recorder. Then simply clamp onto the conductor to be measured to easily observe current waveforms under a wide bandwidth and high sensitivity conditions.

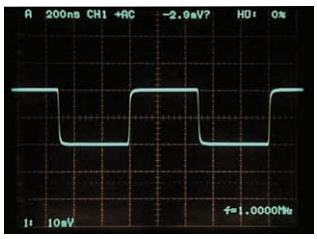
Important Characteristics

3273-50 DC to 50 MHz

■ Square wave response

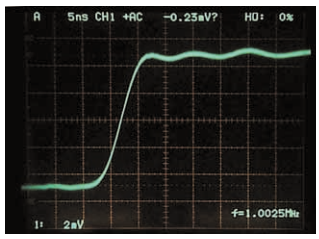


Input: 1 kHz square wave 200 mAp-p
(Oscilloscope bandwidth 400 MHz)



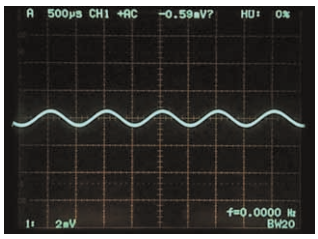
Input: 1 MHz square wave 200 mAp-p
(Oscilloscope bandwidth 400 MHz)

■ Transient response



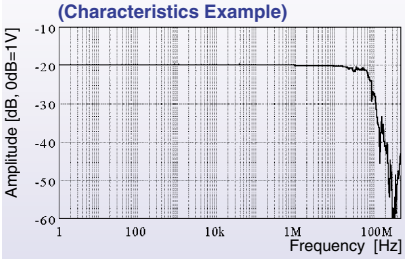
Input: 100 mAp-p
(Oscilloscope bandwidth 400 MHz)

■ Low-current measurement

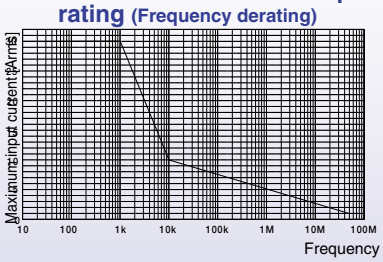


Input: 1 kHz sine wave 10 mAp-p
(Oscilloscope bandwidth 20 MHz)

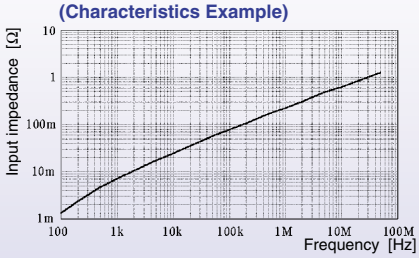
■ 1. Frequency response (Characteristics Example)



■ 2. Continuous maximum input rating (Frequency derating)



■ 3. Input impedance (Characteristics Example)



3276 DC to 100 MHz

3273-50 to 3276 CLAMP ON PROBE

Features

- High S/N ratio: ideal for measuring milliampere waveforms (Model 3273-50)
- Capable of waveform monitoring from wide band and minute currents to large currents (Model 3274)
- Permits waveform observation of large current of up to 500 Arms (Model 3275)
- Wide-band waveform observations, from DC to 100 MHz (Model 3276)
- Direct connection to BNC input of oscilloscope
- Highly accurate current detection
- Newly developed indium-antimony (InSb) thin-film Hall element
- Simple overload protector prevents damage due to overheating
- Easy measurement
- The 3273-50 includes a soft case, the 3274 / 3275 /3276 includes a hard carrying case

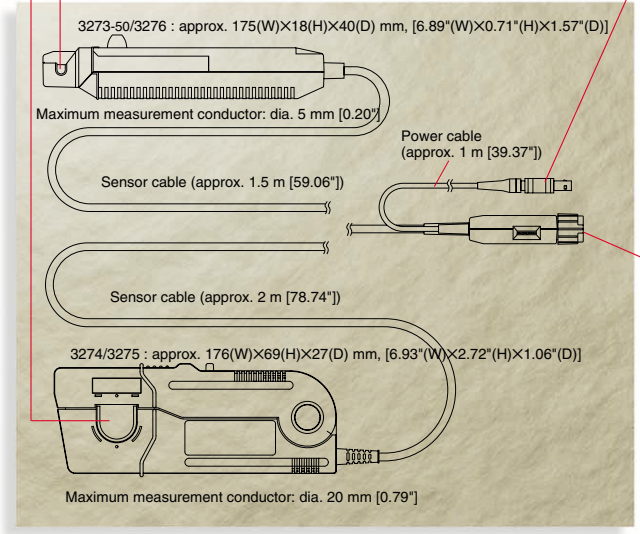
Sensor head

Composed of molded parts, ferrite and Hall elements. The thin-film of the Hall element especially improves detection sensitivity to realize wider bands and high sensitivity monitoring.



Power supply plug

Connects to the FET probe power supply outlet of an oscilloscope or to the optional 3269 / 3272 power supply unit.

(Provided that connector type, pin assignment, voltage, and capacity rating match, the 3273-50 to 3276 can be powered also from another source. For operation safety, be sure to refer to the specifications to ensure an exact match.)

■ 3269/3272 POWER SUPPLY

Dedicated power supplies for the Clamp Sensor series-ideal when power is not available from the oscilloscope, or when using the probes for common measurement applications.

3272

*The total current output of the 3272 is 600mA (for two channels). Depending on the current of the measurement object, simultaneous use of both channels may not be available.

3269

The 3269 is capable of powering 4 channels of high current sensors simultaneously.

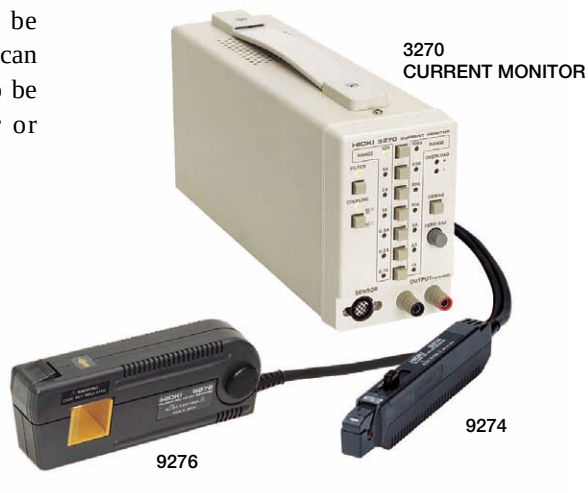
9274/9276 CLAMP ON AC/DC SENSOR

DC to MHz Range

A wide range of current waveforms from DC to MHz can be observed at high precision. The 3270 is a DC/AC amplifier that can be connected to the 9274/9276 to enable current waveforms to be recorded and easily observed by connecting a recorder or oscilloscope.

● Incorporates our custom-developed InSb thin-film Hall element

The high degree of electron mobility in InSb makes it ideal for our highly sensitive thin-film Hall element. We have adapted these qualities for measuring a wide range of current, as well as for very low levels.



The probe cannot be used alone: the 3270 is required.

⚠ WARNING

1. To avoid short circuits and electric shock accidents when using a clamp-on sensor, use only with power lines carrying voltages within the rating limit of the sensor.
2. To avoid short circuits and electric shock accidents when the clamp-on sensor is open, do not use on bare conductors.
