PW3365-20

Inside the PW9020 is an electrode (a metal plate). When there is a potential difference between this electrode and the measured line, a minute current flows as a result. By detecting this minute current and generating a voltage such that the current declines to zero, it is possible to accurately measure the voltage without being affected by the outer diameter of the measured cable or its insulation.

Safely and Easily

Measure Harmonic

Measure harmonics with no-metal-contact voltage measurement technology

This useful feature has come to the PW3365, enabling the instrument to measure voltage and current harmonics in addition to power. Hioki's no-metal-contact voltage measurement technology lets you safely and easily measure THD and the dominant 5th- and 7th-order harmonics.

Voltage and current levels — Graph display

Voltage and current content percentage — List display

Harmonic Display

Display harmonics up to the 13th order

Present harmonic RMS values and content percentages as a list of numerical values or graph and display total harmonic distortion ratio.

The PW3365 can analyze voltage and current harmonic components from the fundamental wave to the 13th order on 50 Hz/60 Hz power lines.

**Harmonic Graph Display**

Harmonic Value List Display

You can save maximum, average, and minimum values in binary format for each time interval to the instrument's SD card.

The Power Logger Viewer SF1001 is required in order to display data on a computer.

Time-series display of harmonics

Select the fundamental wave, 3rd order, or 5th order for current harmonics to display a time-series graph.
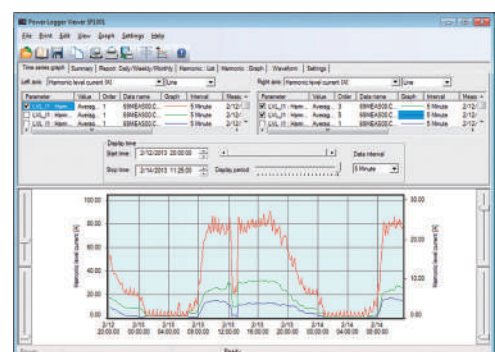

What causes harmonics?

Many electric devices incorporate power circuits with capacitor input. Such devices have rectification circuits to convert the AC power supply to DC power, and distortion in the resulting voltage and current waveforms causes harmonics.

Power circuits that distort waveforms
Typical power circuit

Voltage waveform and current waveform
Current flows only near the peak of the voltage waveform, resulting in a voltage drop that flattens the peak portion of the voltage waveform.

Analysis points

Waveform as measured by an instrument designed for observing harmonics
Current flows only near the peak of the voltage waveform
THD and dominant orders

Waveform as measured by the PW3365

The PW3365 displays content percentages for each harmonic voltage order as well as the voltage total harmonic distortion (THD).

The instrument is especially useful for measuring the dominant 5th and 7th orders.

Example data format

Choose from four display formats

Form	Display data for a user-specified interval as a summary form.
Daily report	Tabulate data by demand time and display a form summarizing a one-day period.
Weekly report	Tabulate data by day and display a form summarizing a one-week period.
Monthly report	Tabulate data by day and display a form summarizing a one-month period.

Check average and maximum values as well as the time at which the maximum value occurred

(Maximum values for daily, weekly, and monthly reports indicate maximum values as tabulated by demand time.)

When demand power is selected, the following quantities are calculated:

Load rate and demand rate

WP+ [kWh]: Active energy

Active energy (consumption) from the start of recording

Pdem+ [kW]: Active power demand value

Average active power value (consumption) for each interval
