LCR METER IM3536

Component measuring instruments 

4Hz to 8MHz
 Measurement frequency

The new standard

Introducing a new LCR meter that delivers both advanced specifications and exceptional cost performance, making it ideal for use in applications ranging from production lines to research and development.

- High precision: $\pm 0.05\%$ rdg.
- High speed: 1 ms (fastest speed)
- High reliability: Built-in contact check function

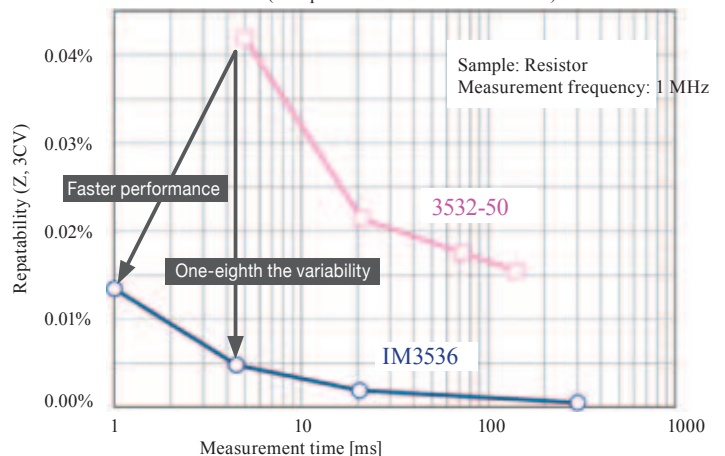

Test fixtures and probes sold separately. Photograph depicts IM3536 used in combination with the SMD Test Fixture 9677.

One-eighth the precision variability and five times the measurement speed of legacy models means dramatically improved productivity.

High speed Stability

Repeatability and measurement time
 (Comparison of IM3536 and 3532-50)

Boost productivity by performing two jobs with one instrument: Continuous measurement function

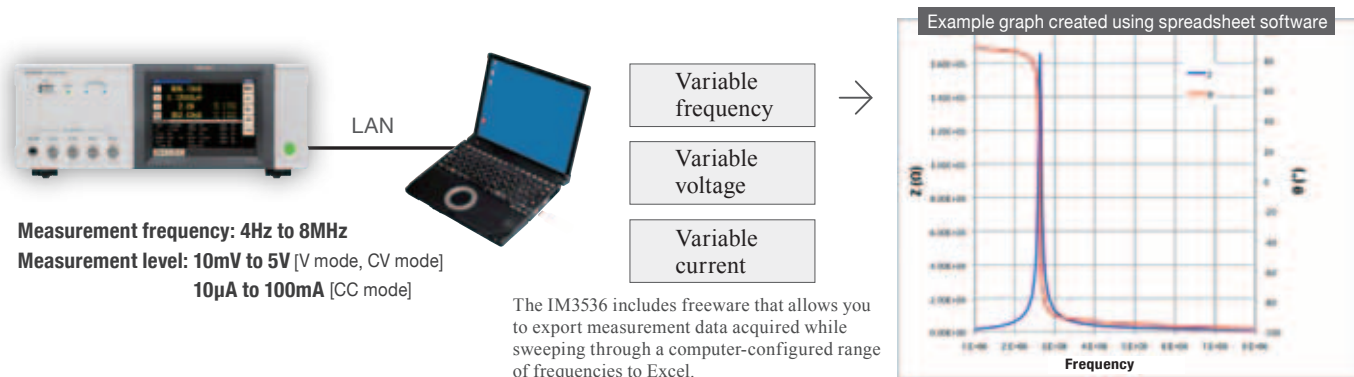

Example: You wish to perform L-Q measurement of a power supply's impedance at 1 kHz as well as DC resistance (DCR) measurement. The IM3536 lets you perform high-speed, continuous measurement using different conditions with a single LCR meter.

In the past, the application required two instruments. Now it can be accomplished with a single instrument.

The IM3536 is ideal for R&D using a broad range of measurement conditions or for evaluations under conditions of actual use.

Example: You wish to analyze the resonance point of a coil while varying the frequency or you wish to perform measurements while varying the measurement signal in order to evaluate a sample that exhibits signal dependence.
