

High Accuracy Power Analysis.
Anywhere, Anytime.

High Accuracy and Mobility. A New Value for Power Analysis.

The original HIOKI POWER ANALYZER 3390, released 8 years ago, featured the latest measurement technology built into a compact casing.

Pair with Hioki current sensors and take them anywhere to immediately make highly accurate measurements.

This was the unique value of the 3390.

Now, Hioki has enhanced this value while refining the measurement technology even further.

Proper accuracy and bandwidth to precisely measure inverter output.

Phase shift function for the exact measurement of high frequency, low power factor power.

A broad current sensor lineup that expands the range of measurement possibilities.

Refinements that empower you to conduct precise power analysis in any situation.

Complete Pursuit of Measurement Accuracy and High Frequency **Characteristics**

The PW3390 delivers 4 input channels and ±0.04% basic accuracy for power - the top instrument in its class. Achieve more precise measurements of the power and efficiency of high efficiency equipment used in power electronics. Further, a 200 kHz measurement band and flat amplitude and phase characteristics up to high frequencies enable the precise measurement of power at top frequency levels and low power

Power Analysis Engine That Achieves High-Speed Simultaneous Calculation on **5 Systems**

Precisely capture input waveforms with 500 kS/s high-speed sampling and a high resolution 16-bit A/D converter. The power analysis engine performs independent digital processing for 5 systems: period detection, wideband power analysis, harmonic analysis, waveform analysis, and noise analysis. High-speed simultaneous calculation processing enables both precise measurements and a 50 ms data refresh rate.

Current Sensors for the Thorough Pursuit of High Accuracy. Achieve Superior Accuracy for High-Frequency, Low Power Factor Power.

High Accuracy Sensor Pass-Through Type

Pass-through type with high accuracy and a wide measurement range. Conduct extremely accurate measurements of large currents to a maximum of 1000 A over a wide operating temperature

High Accuracy Sensor Clamp Type

Clamp for quick and easy connections. Conduct extremely accurate measurements of large currents to a maximum of 1000 A over a wide operating temperature range.

Newly developed DCCT method delivers expansive measurement range and superior measurement accuracy at a rating of 50 A.

Built-in Current Sensor Phase Shift Function

Equipped with new virtual oversampling technology. Achieve phase shift equivalent to 200 MS/s while maintaining a high speed of 500 kS/s, as well as a high resolution of 16 bits. Set and correct the phase error of the current sensor at a resolution of 0.01°. Use of the phase shift function results in a dramatic reduction of measurement error. This allows the measurement of high-frequency, low-power factor power included in the switching frequency of inverter output, which is difficult to measure with conventional equipment.

Virtual oversampling: Technology that uses a sampling frequency several hundred times higher than the actual sampling frequency to perform virtual deskewing

In the Laboratory or in the Field

Take Highly Accurate Measurements Even in Tough Temperature Conditions

Severe temperature environments, such as engine rooms with intense temperature changes and constant temperature rooms, can hinder high accuracy measurements. The extremely accurate pass-through and clamp type sensors both feature excellent temperature characteristics and a wide operation temperature range to help address these challenges.

Max. 6000 A Measurement on 50 Hz/60 Hz Lines

The CT7040 AC FLEXIBLE CURRENT SENSOR series can measure commercial power lines up to 6000 A, including solar power conditioner output. Even thick cables can be wired easily among crowded wiring or in narrow locations.

New Method for Measuring Large Current over Multi-Cable Wiring

Highly accurate measurement of current in multi-cable wiring with large currents has been difficult-until now. The CT9557 adds the output waveforms from the high accuracy sensors connected to each branch line of the multi-cable wiring, for the highly accurate measurement of large currents.

Achieve High Accuracy Measurement Even in the Field

Dramatically compact and light-weight form factor achieved by concentrating the calculation functions in the power analysis engine. Highly accurate measurements normally achieved in the laboratory are now also possible in the field.

External Power Supply Not Needed for Sensor Connections

Power can be supplied to the current sensor from the main unit, so there is no need to provide a separate external power supply for the current sensor. Connected sensors are recognized automatically, for reliable and quick measurements.

Wiring Displays and Quick Setup Lets You Begin Measuring Immediately

Perform wiring while checking wiring diagrams and vectors on the screen. Optimum settings are performed automatically simply by selecting a connection and using the quick setup function.

Extensive Interface for Linking with External Devices

Wide variety of built-in interfaces, including LAN, USB (communication, memory), CF cards, RS-232C, synchronization control, and external control.

D/A output* delivers analog output at 50 ms for up to 16 parameters. The voltage and current waveform** for each channel can also be output.

Built-in for PW3390-02 and PW3390-03

** During waveform output, accurate reproduction is possible at an output of 500 kS/s and with a sine wave up to 20 kHz.

Switch Screens with a Single Touch, **Accessing a Variety of Power Analysis Methods**

The power analysis engine allows the simultaneous, parallel calculation of all parameters. Access a variety of analysis methods simply by pressing the page keys to switch screens.

Page Keys

Vector

Confirm the voltage/current/power/phase angle for each harmonic order on a vector graph and as numerical values

Waveform

voltage/current waveforms for 4 channels at a high speed of 500 kS/s or a maximum length of 5 seconds. Waveform data can be saved.

Harmonics Graph

Display harmonics up to the 100th order for voltage/current/power in bar graphs. Confirm the numerical data for the selected order at the same time.

Efficiency and Loss

Using active power values and motor power values, confirm efficiency η [%] and loss [W] and total efficiency for each inverter/motor on a single unit at the same time. confirm efficiency η [%] and

Selection Display

Select 4/8/16/32 display parameters individually for each screen, and

Noise

Display FFT results for voltage and current as graphs and numerical values, up to a maximum of 100 kHz. This is perfect for the frequency analysis of inverter noise.

Power

On the basic measurement screen, display voltage/current/power/power factor/frequency and other parameters in a list for each connection.

X-Y Graph

Create inverter characteristic evaluations and motor torque maps. Select the desired parameter to display an X-Y plot graph.

Applications

Measure the Power Conversion Efficiency of Inverters

Key features

- 1. Isolated input of voltage and current on each of 4 channels for simultaneous measurement of the primary and secondary power of inverters
- Simultaneous measurement of all important parameters for secondary analysis of inverters, such as RMS value, MEAN value, and fundamental
- Easy wiring with current sensors. Reliable confirmation of wiring with vector diagrams
- Current sensors reduce effects of common mode noise from inverters during power measurement
- Simultaneous measurement of noise components, in addition to the harmonic analysis required for the measurement of inverter control

Highly Accurate and Fast 50 ms **Calculation of Power in Transient State**

Measure power transient states, including motor operations such as starting and accelerating, at 50 ms refresh rates. Automatically measure and keep up with power with fluctuating frequencies, from a minimum of 0.5 Hz.

Automatic detection of fundamental wave even if the frequency fluctuates, from low to high frequencies

Combined Accuracy of Current Sensors Applicable throughout Entire Range

Combined accuracy throughout the entire range is provided through the use of a built-to-order high accuracy pass-through type current sensor. Obtain highly accurate measurements regardless of range, from large to minute currents, even for loads that fluctuate greatly.

Legacy Model 3390

Combination of 3390 and 9709

(500 A rating)
Total Accuracy when measuring currency of 45 to 66 Hz and f.s. for each range

Model PW3390

Combination of PW3390 and the high accuracy 9709-05* (500 A rating, built-to-order) Total accuracy when measuring currency of 45 to 66 Hz and f.s. for

Measure High-Frequency Noise in Inverters

Power supply problems caused by high switching inverter frequencies are unrelated to the fundamental frequency, making it difficult to conduct proper harmonic analysis. The noise analysis function performs a frequency analysis of noise components up to 100 kHz, and displays the frequency, and voltage and current levels for the top 10 points. This is effective for measuring high-frequency noise in inverters.

Acquire Data from up to 8 Synchronized **Units (32 Channels)**

When you connect CONNECTION CABLE 9683 to multiple PW3390 units, the control signals and internal clocks synchronize. From the master unit, you can control the measurement timing on the PW3390 units that are set as slaves. With interval measurement, you can save synchronized measurement data to a CF card or a PC to achieve simultaneous measurements across a larger number of systems.

^{*} High-accuracy specifications are not defined for the built-to-order high accuracy current sensor when used alone

Analyze and Measure EV/HEV Inverter Motors

Key features

- Easy wiring and highly accurate measurements with the use of a pass-through type current sensor
- Simultaneous measurement of all important parameters for secondary analysis of inverters, such as RMS value, MEAN value, and fundamental components
- 3. 0.5 Hz to 5 kHz harmonic analysis without external clock
- 4. Total measurement of inverter motors with built-in motor analysis function
- Measurement of the voltage, torque, rotation rate, frequency, slip, and motor power required for motor analysis with a single unit
- More precise measurements of electrical angle with incremental type encoders

Electric Angle Measurement of Motors (PW3390-03 only)

The PW3390-03 features a built-in electric angle measurement function required for vector control via dq coordinate systems in high-efficiency synchronized motors. Make real-time measurements of phase angles for voltage and current fundamental wave components based on encoder pulses. Further, zero-adjustment of the phase angle when induced voltage occurs allows electric angle measurement based on the inductive voltage phase. Electric angle can also be used as an Ld and Lq calculation parameter for synchronized motors.

Display motor electric angles on the vector screen

Motor analysis screen (Torque, rotation rate, motor power, slip) For CH B, enter the Z-phase pulse of the encoder to measure electric angle,

and enter the B-phase pulse to measure rotation direction.

A: 0.5640

Measure Harmonics with Consideration for PWM Waveform Characteristics

The zero-crossing filter automatically matches the input frequency in the range of 0.5 Hz to 5 kHz to reliably detect the fundamental frequency. Further, harmonic analysis that is based on the fundamental frequency automatically prevents aliasing error using a digital AAF, which allows both precision and measurement reproducibility at a high level.

Transfer to Data Logger via Bluetooth® wireless technology

0.118k

Connect the PW3390 and a data logger (with support of LR8410 Link) via Bluetooth® wireless technology to wirelessly transmit 8 parameters of measurement values from the PW3390 to the data logger. In addition to the voltage, temperature, humidity, and other parameters measured by the multichannel data logger, you can also integrate the measurement values of the PW3390 and observe and record them in real time.

^{*} Connection requires the serial - (Bluetooth® wireless technology) conversion adapter and power supply adapter recommended by Hioki. Please inquire with your Hioki distributor.

Measure the Efficiency of PV Power Conditioners (PCS)

Key features

- 4 built-in channels, standard. Simultaneously measure the I/O characteristics of power conditioners.
- Current sensors can measure even large currents with high accuracy. Reliable confirmation of wiring with vector diagrams.
- Measure the amount of power sold/ purchased from power conditioner output on interconnected systems with a single unit.
- DC mode integration function, which responds quickly to input fluctuations such as with solar power, built in.
- Measure ripple factor, efficiency, loss, and all other parameters that are required for the measurement of power conditioners for solar power with a single unit.

HIOKI's Current Measurement Solutions for Large Currents of 1000 A or More

Introducing a lineup of sensors taking measurements up to 6000 A for 50 Hz/60 Hz, and up to 2000 A for direct current. The CT9557 SENSOR UNIT lets you add the output waveforms from multiple high accuracy sensors. Use multi-cable wiring lines to take highly accurate measurements of up to 4000 A.

			Blue: High accuracy sensor	Black: Normal sensors

CT9557 Add waveforms from multiple current sensors

CT7742 (AC/DC 2000 A)
Stable measurement of DC without zero

CT7642 (AC/DC 2000 A) Wider frequency characteristics than the CT7742

CT7044/ CT7045/ CT7046 (AC 6000 A) Flexible, for easy connections even in narrow

Support for PCS Parameters

Simultaneously display the parameters required for PCS, such as efficiency, loss, DC ripple factor, and 3-phase unbalance rate. Easily check the required measured items for improved test efficiency. By matching the measurement synchronization source for both input and output, you can perform DC power measurements that are synchronized with the output AC as well as stable efficiency measurements.

±0.01 Hz^{*} Basic Accuracy for Voltage Frequency Measurements

Perform the frequency measurements that are required for various PCS tests with industry-leading accuracy and stability. Take highly accurate frequency measurements on up to 4 channels simultaneously, while also measuring other parameters at the same time.

* If you require even higher accuracy for frequency, please inquire with your local Hioki distributor.

Test Automobile Fuel Economy

Key features

- Accurately measure recharge and discharge power with excellent basic accuracy and DC accuracy.
- 4 built-in channels, standard. Support for multiple recharge and discharge measurements, including auxiliary batteries.
- Easily achieve highly accurate measurements with clamp sensors, which can be used in a wide range of operating temperatures.
- Easily link with other measuring instruments through integration control with an external control interface.

Evaluate WLTP Mode Performance - A New Fuel Economy Standard

Taking fuel economy measurements that comply with WLTP standards requires the precise measurement of current integration and power integration for the recharging/discharging of each battery in the system. High accuracy clamp current sensors, the excellent DC accuracy of the PW3390, and the ability to integrate current and power at 50 ms intervals are extremely effective in meeting this application.

Optimal Current Sensors for Automotive Testing

Easily connect high accuracy clamp-type sensors without cutting the cables. Sensors operate over a temperature range of -40°C to 85°C (-40°F to 185°F), characteristics that enable highly accurate measurements even inside the engine room of a car.

Current and Power Integration Function by Polarity

DC integration measurement integrates the recharging power and discharging power by polarity for every sample at 500 kS/s, and measures positive-direction power magnitude, negative-direction power magnitude, and the sum of positive- and negative-direction power magnitude during the integration period. Accurate measurement of recharging power and discharging power is possible even if there is rapid repetition of battery recharging/discharging.

Link to Peripheral Devices via External Control

Use external control terminals to START/STOP integration and capture screen shots. This makes it easy to control operations from console switches and link to the timing of other instruments when measuring the performance of an actual automobile.

External Appearance

Software

Download software, drivers, and the Communications Command Instruction Manual from the Hioki website. https://www.hioki.com

"PW Communicator" PC Communication Software (Available soon)

PW Communicator is an application program for communicating between a PW3390 series power analyzer and a PC. It includes many useful functions, such as configuring PW3390 settings, monitoring measurement values, saving CSV data, and calculating efficiency.

Numerical value monitoring

Display the PW3390's measurement values on the PC screen. You can freely select up to 32 values, such as voltage, current, power, and harmonics.

Waveform monitoring

Monitor the measured voltage, current, and waveforms on the PC screen.

Meter setting

Change the settings of the connected PW3390 from the PC screen.

Measure with

In addition to the PW3390, it is also possible to perform batch control of up to 8 devices from the HIOKI PW6001 Power Analyzer and the PW3335, PW3336, and PW3337 Power Meter series. You can also simultaneously record measured data to the PC, and

perform efficiency calculations for measuring instruments.

Record in CSV format

Record measured data to a CSV file at regular time intervals. The minimum recording

interval is 50 ms.

LabVIEW Driver (Available soon)

Obtain data and configure measurement systems with the LabVIEW driver.

-3. Integration Measurement Specifications

Measurement mode	Selectable between RMS or DC for each wiring mode
	ů .
Measurement items	Current integration (lh+, lh-, and lh), active power integration (WP+, WP-, and WP) lh+ and lh- only for DC mode measurements, and lh only for RMS mode measurements
Measurement method	Digital calculation from each current and active power phase (when averaging, calculates with previous average value) In DC mode: calculates current value at every sample, and integrates instantaneous power independent of polarity In RMS mode: Integrates current effective values between measurement intervals, and polarity-independent active power value
Measurement interval	50 ms data update interval
Measuring range	Integration value: 0 Ah/Wh to ±9999.99 TAh/TWh Integration time: No greater than 9999h59m
Integration time accuracy	±50 ppm ±1 dgt. (0°C to 40°C (32°F to 104°F))
Integration accuracy	± (current and active power accuracy) ± integration time accuracy
Backup function	Integration automatically resumes after power outages.

-4. Harmonic Measurement Specifications

Number of	4 channels Harmonic measurements not available for multiple systems with different frequencies.			
Measurement items	Harmonic rms voltage, harmonic voltage percentage, harmonic voltage phase angle, harmonic rms current, harmonic current percentage, harmonic current phase angle, harmonic active power, harmonic power percentage, harmonic voltage-current phase difference, total harmonic voltage distortion, total harmonic current distortion, voltage unbalance factor, current unbalance factor			
Measurement method	Zero-crossing synchronous Fixed 500 kS/s sampling, a Equal thinning between zer	fter digital anti-ali	asing filter	,, ,,
Harmonic sync source	Ut to U4, I1 to I4, External (with motor analysis and CH B set for pulse input), DC selectable (50 ms or 100 ms)			r pulse input), DC
FFT calculation word length	32 bits			
Anti-aliasing filter	Digital filter (automatically s	set based on sync	hronization freque	ncy)
Windows	Rectangular			
Synchronization frequency range	As specified for power measurements			
Data update interval	50 ms (measurement-frequ	ency-dependent	at 45 Hz and below)
Phase zero adjustment	Provided by key operation or e	external control com	mand (only with exte	rnal sync source)
THD calculation	THD-F/THD-R			
Highest order analysis and window waveforms	Synchronization frequency range	Window waveforms	Analysis order	
	0.5 Hz ≤ f < 40 Hz	1	100th	
	40 Hz ≤ f < 80 Hz	1	100th	
	80 Hz ≤ f < 160 Hz	2	80th	
	160 Hz ≤ f < 320 Hz	4	40th	
	320 Hz ≤ f < 640 Hz	8	20th	
	640 Hz ≤ f < 1.2 kHz	16	10th	
	1.2 kHz ≤ f < 2.5 kHz	32	5th	

	2.5 kHz ≤ f < 5.0 kHz	64	3th	
Accuracy	Frequency	Voltage(U), Cu	rrent(I), Active Pov	ver(P)
	0.5 Hz ≤ f < 30 Hz	±0.4% rdg. ±0.	2% f.s.	
	30 Hz ≤ f ≤ 400 Hz	±0.3% rdg. ±0.	1% f.s.	
	400 Hz < f ≤ 1 kHz	±0.4% rdg. ±0.	2% f.s.	
	1 kHz < f ≤ 5 kHz	±1.0% rdg. ±0.	5% f.s.	
	5 kHz < f ≤ 10 kHz	±2.0% rdg. ±1.	0% f.s.	
	10 kHz < f ≤ 13 kHz	±5.0% rdg. ±1.	0% f.s.	
	Not specified for sync fre Add the LPF accuracy to			

-5. Noise Measurement Specifications

Calculation channels	1 (Select one from CH1 to CH4)
Calculation items	Voltage noise/Current noise
Calculation type	RMS spectrum
Calculation method	Fixed 500 kS/s sampling, thinning after digital anti-aliasing filter
FFT calculation word length	32 bits
FFT data points	1000/5000/10,000/50,000 (according to displayed waveform recording length)
Anti-aliasing filter	Automatic digital filter (varies with maximum analysis frequency)
Windows	Rectangular/Hanning/flat-top
Data update interval	Determined by FFT points within approx. 400 ms, 1 s, 2 s, or 15 s, with gap
Highest analysis frequency	100 kHz/50 kHz/20 kHz/10 kHz/5 kHz/2 kHz
Frequency resolution	0.2 Hz to 500 Hz (Determined by FFT points and maximum analysis frequency)
Noise amplitude measurement	Calculates the ten highest level and frequency voltage and current FFT peak values (local maxima).
Lower limit noise frequency	0 kHz to 10 kHz

-6. Motor Analysis Specifications (Model PW3390-03)

Number of input channels CH A: Analog DC input/Frequency input (selectable) CH B: Analog DC input/Pulse input (selectable) CH Z: Pulse input Measurement input Insulated BNC jacks	
Massurament input Insulated BNC iacks	
terminal type	
Input impedance (DC) 1 MΩ ±100 kΩ	
Input methods Isolated and differential inputs (not isolated between channels B and Z)	
Measurement items Voltage, torque, rotation rate, frequency, slip, and motor power	
Synchronization source U1 to U4, I1 to I4, Ext (with CH B set for pulse input), DC (50 ms/100 ms Common to channels A and B)
Measurement f1 to f4 (for slip calculations) frequency source	
Maximum input voltage ±20 V (during analog, frequency, and pulse input)	
Maximum rated voltage to earth 50 V (50 Hz/60 Hz)	

(1). Analog DC Input (CH A/CH B)

(1). 7 maiog 20 mpc	2. (0.17.00.1.2)
Measurement range	±1 V, ±5 V, ±10 V (when inputting analog DC)
Valid input range	1% to 110% f.s.
Sampling	10 kHz/16 bits
Response time	1 ms (measuring zero to full scale, with LPF off)
Measurement method	Simultaneous digital sampling and zero-crossing synchronous calculation system (cumulative average of intervals between zero crossings)
Measurement accuracy	±0.08% rdg. ±0.1% f.s.

Temperature coefficient	±0.03% f.s./°C
Effect of common mode voltage	Not more than ±0.01% f.s. (with 50 V [DC or 50 Hz/60 Hz] between measurement jacks and PW3390 chassis)
Effect of external magnetic field	Not more than ±0.1% f.s. (at 400 A/m DC and 50 Hz/60 Hz magnetic fields)
LPF	OFF/ON (OFF: 4 kHz, ON: 1 kHz)
Total display area	Zero-suppression range setting ±120%
Zero adjustment	Zero-corrected input offset of voltage ±10% f.s. or less
Scaling	0.01 ~ 9999.99
Unit	CH A: V, N• m, mN• m, kN• m CH B: V. Hz. r/min

(2). Frequency Input (CH A only)

Valid amplitude range	±5 V peak (5 V symmetrical, equivalent to RS-422 complementary signal)
Max. measurement frequency	100 kHz
Measurement range	1 kHz to 100 kHz
Data output interval	According to synchronization source
Measurement accuracy	±0.05% rdg., ±3 dgt.
Total display area	1.000 kHz to 99.999 kHz
Frequency range	Select fc and fd for frequency range fc ± fd [Hz] (frequency measurement only) 1 kHz to 98 kHz in 1 kHz units, where fc + fd < 100 kHz and fc - fd > 1 kHz
Rated torque	1 ~ 999
Unit	Hz, N• m, mN• m, kN• m

(3). Pulse Input (CH B only)

(5). I dise iliput (Oi	i D offis)
Detection level	Low: 0.5 V or less; High: 2.0 V or more
Measurement range	1 Hz to 200 kHz (at 50% duty)
Division setting range	1 ~ 60000
Measurement frequency range	0.5 Hz to 5.0 kHz (limited to measured pulse frequency divided by selected no. of divisions)
Minimum detectable pulse width	2.5 µs or more
Measurement accuracy	±0.05% rdg., ±3 dgt.
Motor poles	2 ~ 98
Max. measurement frequency	100 Hz, 500 Hz, 1 kHz, 5 kHz
Pulse count	Integer multiple of half the number of motor poles, from 1 to 60,000
Unit	Hz, r/min

(4). Pulse Input (CH Z only)

· · · · · ·	• • • • • • • • • • • • • • • • • • • •
Detection level	Low: 0.5 V or less; High: 2.0 V or more
Measurement range	0.1 Hz to 200 kHz (at 50% duty)
Minimum detectable pulse width	2.5 µs or more
Settings	OFF/Z Phase/B Phase (clear counts of CHB in rising edge during Z Phase, detect polar code for number of rotations during B Phase)

-7. D/A Output Option Specifications (Models PW3390-02 and PW3390-03)

Number of output channels	16 channels
Output contents	CH1 to CH8: Selectable analog/waveform outputs CH9 to CH16: Analog output
Output items	Analog output: Select a basic measurement item for each output channel. Waveform output: Output voltage or current measured waveforms.
Output connector	One 25-pin female D-sub
D/A conversion resolution	16 bits (polarity + 15 bits)
Output accuracy	Analog output: Measurement accuracy ±0.2% f.s. (DC level) Waveform output: Measurement accuracy ±0.5% f.s. (at ±2 V f.s.), ±1.0% f.s. (at ±1 V f.s.) (rms level within synchronous frequency range)
Output update interval	Analog output: 50 ms (according to input data update interval of selected parameter) Waveform output: 500 kHz
Output voltage	Analog output: ±5 V DC nom. (approx. ±12 V DC max.) Waveform output: ±2 V/±1 V switchable, crest factor of 2.5 or greater Setting applies to all channels.
Output impedance	100 Ω ±5 Ω
Temperature coefficient	±0.05% f.s./°C

-8. Display Specifications

Display type	9-inch TFT color LCD (800×480 dots)
	Measurement values: 200 ms (independent of internal data update interval) Waveforms, FFT: screen-dependent

-9. External Interface Specifications

(1). USB Interface (Functions)

Connector	Mini-B receptacle ×1
Compliance standard	USB2.0 (Full Speed/High Speed)
Class	Individual (USB488h)
Connection destination	Computer (Windows10/Windows8/Windows7, 32bit/64bit)
Function	Data transfer and command control

(2). USB Memory Interface

Connector	USB type A connector ×1
Compliance standard	USB2.0
USB power supply	500 mA maximum
USB storage device support	USB Mass Storage Class
Function	Save and load settings files, Save waveform data Save displayed measurement values (CSV format) Copy measurement values and recorded data (from CF card) Save screen captures

(3). LAN Interface

Connector	RJ-45 connector x 1
Compliance standard	IEEE 802.3 compliant
Transmission method	10BASE-T/100BASE-TX Auto detected
Protocol	TCP/IP
Function	HTTP server (remote operation), Dedicated port (data transfer and command control)

(4). CF Card Interface

Slot	One Type 1
Compatible card	CompactFlash memory card (32 MB or higher)
Supported memory capacity	Up to 2 GB
Data format	MS-DOS format (FAT16/FAT32)
Recordable content	Save and load settings files, Save waveform data Save displayed measurement values and auto-recorded data (CSV format) Copy measurements/recorded data (from USB storage) Save screen captures

(5). RS-232C Interface

	RS-232C, [EIA RS-232D], [CCITT V.24], [IJS X5101] compliant Full duplex, start-stop synchronization, 8-bit data, no parity, one stop bit Hardware flow control, CR+LF delimiter
Connector	D-sub9 pin connector x1
Communication speeds	9600 bps, 19,200 bps, 38,400 bps
	Command control, Bluetooth® logger connectivity (simultaneous use not supported)

(6). Synchronization Control Interface

One-second clock, integration START/STOP, DATA RESET, EVENT
IN: One 9-pin female mini-DIN jack, OUT: One 8-pin female mini-DIN jack
5 V CMOS
±20 V
2 μs (rising edge)

(7). External Control Interface

Connector types	9-pin round connector ×1; also used as synchronization control interface
Electrical specifications	Logic signal of 0 V/5 V (2.5 V to 5 V), or contact signal (shorted/open)
	Integration start, integration stop, data reset, event (the event set as the synchronization control function) Cannot be used at the same time as synchronization control.

Function Specifications -1. Control Functions

AUTO range function	Automatically selects voltage and current ranges according to measured amplitude on each phase. Operating states: Selectable on or off for each phase system Auto-ranging span: Wide/Narrow (common to all wiring systems)
Timing control function	Interval OFF/50 ms/100 ms/200 ms/500 ms/1 s/5 s/10 s/ 15 s/30 s/1 min/5 min/10 min/15 min/30 min/60 min Setting determines the maximum data-saving capacity Timing controls OFF/Timer/RTC Timer : 10 s to 9999:59:59 [h:m:s] (in seconds) Real-time clock : Start and stop times (in minutes)
Hold function	Stops all updating of displayed measurement values and waveforms, and holds display. Internal calculations such as integration and averaging, clock, and peak-over display continue to be updated.
Peak hold function	All measurement values are updated to display the maximum value for each measurement. Displayed waveforms and integration values continue to be updated with instantaneous values.

-2. Calculation Fun	ctions
Scaling calculation	VT(PT) ratio and CT ratio: OFF/0.01 to 9999.99
Average calculation	OFF/FAST/MID/SLOW/SLOW2/SLOW3 Exponentially averages all instantaneous measurement values including harmonics (but not peak, integration, or FFT noise values). Applied to displayed values and saved data. Response speed (time remains within specified accuracy when input changes from 0 to 100% f.s.) FAST: 0.2 s, MID: 1.0 s, SLOW: 5 s, SLOW2: 25 s, SLOW3: 100 s
Efficiency and loss calculations	$ \begin{split} & \text{Efficiency } \eta [\%] \text{ and Loss [W] are calculated from active power values measured} \\ & \text{on each phase and system.} \\ & \text{For PW3390-03, motor power (Pm) is also applied as a calculation item.} \\ & \text{Maximum no. of simultaneous calculations: Efficiency and loss, by three formulas (Parameters are specified for Pin and Pout)} \\ & \text{Calculation method:} & \text{Efficiency } \eta = 100 \times \text{IPoutl/IPinl} \\ & \text{Loss} = \text{IPinl - IPoutl} \end{split} $
Δ-Y calculation	For 3P3W3M systems, converts between line-to-line voltage and phase voltage waveforms using a virtual center point. All voltage parameters including harmonics such as true rms voltage are calculated as phase voltage waveforms. U1s = (U1s-U3s)/3, U2s = (U2s-U1s)/3, U3s =(U3s-U2s)/3
Selecting the calculation method	TYPE1/TYPE2 (only valid when wiring is 3P3W3M) Select the calculation method used to calculate the apparent power and reactive power during 3P3W3M wiring. Only affect measurement values S123, Q123, ф123, λ123
Current sensor phase correction calculations	Compensation by calculating the current sensor's harmonic phase characteristics Correction points are set using frequency and phase difference (set separately for each wiring mode). Frequency: 0.001 kHz to 999.999 kHz (in 0.001 kHz increments) Phase difference: 0.00 deg. to 99.000 deg. (in 0.01 deg. increments) However, the time difference calculated from the frequency phase difference is limited to a maximum of 200 us in 5 ns increments.

-3. Display Functions

Wiring Check screen	The wiring diagram and voltage/current vectors are displayed for the selected wiring system(s). The correct range for the wiring system is shown on the vector display, to confirm proper measurement cable connections.
Independent wiring system display mode	Displays power and harmonic measurement values for channels 1 to 4. A composite measurement line pattern is displayed for each system. Basic, voltage, current, and power measurement parameter, harmonic bar graph, harmonic list, and harmonic vector screens
Display Selections screen	Select to display any 4, 8, 16, or 32 of the basic measurement parameters. Display layout: 4, 8, 16, or 32 parameters (4 patterns)
Efficiency and Loss screen	The efficiency and loss obtained by the specified calculation formulas are displayed numerically. Three efficiency and three loss values.

Waveform & Noise screen	are displayed compre Trigger: Synchronized Recording length: 100	Voltage and current waveforms sampled at 500 kHz and noise measurements are displayed compressed on one screen. Trigger: Synchronized with the harmonic sync source Recording length: 1000/5000/10,000/50,000 x All voltage and current channels Compression ratio: 1/1, 1/2, 1/5, 1/10, 1/20, 1/50 (peak-to-peak compression) Recording time:

-4. Saving Functions

3	
Auto-save function	As the items to be saved, select any measured values including harmonics and noise value data of the FFT function. The selected items are stored to CF card during every measurement interval. (Storage to USB memory is not available.) Can be controlled by timer or real-time clock. Max. no. of saved items: Interval-setting-dependent
	Data format: CSV format
Manual saving function	Save destinations: USB memory/CF card
	Measurement data As the items to be saved, select any measured values including harmonics and noise value data of the FFT function. Pressing the SAVE key saves each measurement value at that moment to the save destination. File format: CSV format Screen capture The COPY key captures and saves a bitmap image of the display to the save destination. This function can be used at an interval of 5 sec or more while automatic saving is in progress. File format: Compressed BMP format Settings data Settings information can be saved/loaded as a settings file. File format: SET format (for PW3390 only) Waveform data Saves the waveform being displayed by means of [Wave/Noise] display. File format: CSV format

-5. Synchronous Control Function

Function	Synchronous measurements are available by using sync cables to connect Model PW3390 (master/slave). When internal settings match, auto-save is available while synchronized.
Synchronized items	Clock, data update interval (except for FFT calculations), integration start/stop, data reset, certain events
Event items	Hold, manual save, screen capture
Synchronization timing	Clock, data update interval Within 10 s after power-on by a slave PW3390 Start/stop, data reset, event Upon key-press and communications operations on the master PW3390
Synchronization delay	Maximum 5 μs per connection. Maximum synchronization delay of an event is +50 ms

-6. Bluetooth® Logger Connectivity

	Sends measured values wirelessly to logger by using a Bluetooth® serial conversion adapter.
Supported devices	Hioki LR8410 Link-compatible loggers (LR8410, LR8416)
Sent data	Measured values assigned to the D/A CH9 to CH16 analog output parameters

-7. Other Functions

7. Othor ranotions	
Display language selection	Japanese, English, Chinese
Beep sound	OFF/ON
Screen color schemes	COLOR1 (black)/2 (blue-green)/3 (blue)/4 (gray)/5 (navy blue)
Start-up screen selection	Wiring or Last-displayed screen (Measurement screens only)
LCD backlight	ON/1 min/5 min/10 min/30 min/60 min
CSV file format	CSV/SSV
Real-time clock function	Auto-calendar, leap-year correcting 24-hour clock
RTC accuracy	±3 s per day @25°C (77°F)
Sensor recognition	Current sensors are automatically recognized when connected (Excluding the CT7000 series sensors)
Warning indicators	When peak over occurs on voltage and current measurement channels, When no sync source is detected Warning indicators for all channels are displayed on all pages of the MEAS screen.
Key-lock	Toggles on/off by holding the ESC key for three seconds.
System reset	Returns all settings to factory defaults
Power-on reset	Returns all settings including language and communications settings, to factory defaults.
File operations	Media content list display, format media, create folders, delete files and folders, copy between storage media

General Specifications

Operating environment	Indoors, Pollution Degree 2, altitude up to 2000 m (6562.20 ft)
Operating temperature and humidity	Temperature: 0°C to 40°C (32°F to 104°F), Humidity: 80% RH or less (no condensation)
Storage temperature and humidity	-10°C to 50°C (14°F to 122°F), 80% RH or less (no condensation)
Dustproof and waterproof	IP30 (EN 60529) (With CF card cover open: IP20)
Applicable standards	Safety EN 61010 EMC EN 61326 Class A
Power supply	100 V to 240 V AC, 50 Hz/60 Hz, Maximum rated power: 140 VA Anticipated transient overvoltage: 2500 V
Backup battery life	Clock, settings and integration values (Lithium battery), Approx. 10 years, @23°C (73°F)
Dimensions	340 mm (13.39 in) W x 170 mm (6.69 in) H x 156 mm (6.14 in) D (excluding protrusions)
Mass	4.6 kg (162.3 oz) with PW3390-03
Product warranty period	1 year
Accessories	Instruction Manual ×1, Measurement Guide ×1, Power cord ×1, USB cable (0.9 m (2.95 ft)) ×1, Input cord label ×2, D-sub connector ×1 (PW3390-02, PW3390-03)

Wiring connection example 2 – Introducing a new and innovative measuring method

Shorten the wiring for current measurement by installing the PW9100 close to the measurement target. This will also keep the effects of wiring resistance, capacity coupling and other objective factors on the measured values to a minimum.

* Requires EXTENSION CABLE CT9902

- * CONVERSION CABLE CT9920 is required to connect to PW3390.
- ** CONNECTION CABLE CT9904 is required to connect to PW3390.

CONVERSION CABLE CT9900

Required to connect PW3390 to the current sensor with HIOKI PL23 on the output connector.

[Applicable products] CT6841, CT6843, CT6844, CT6845, CT6846, CT6862, CT6863, 9709, CT6865, 9272-10

CONVERSION CABLE CT9920

Required to connect PW3390 to the current sensor with HIOKI PL14 on the output connector.

[Applicable products] CT7742, CT7642, CT7044, CT7045, CT7046

CONNECTION CABLE CT9904

Cable length: 1 m (3.28 ft) Required to connect the summing waveform output terminal of CT9557 to PW3390.

[Applicable products] CT9557

Built-To-Order (Current Measurement)

PW9100 5A-rated model

9709-05 high-accuracy model CT6862-05 high-accuracy model Please contact your Hioki distributor or subsidiary for more information.

CT6863-05 high-accuracy model

AC/DC 2000 A high accuracy sensor, pass-through type

Voltage Measurement Options

VOLTAGE CORD L9438-50

Red, black: 1 each 1000 V specification, Cord length: 3 m (9.84 ft) CAT IV 600 V. CAT III 1000 V

EXTENSION CABLE SET L4931

Red, black: 1 each, With connector, Cable length: 1.5 m (4.92 ft) For extension of L9438-50 or L1000 CAT IV 600 V. CAT III 1000 V

Other Options

PC CARD 512 MB 9728 PC CARD 1 GB 9729 PC CARD 2 GB 9830

Use only PC Cards sold by HIOKI. Compatibility and performance are not guaranteed for PC cards made by other manufacturers. You may be unable to read from or save data to such cards.

CARRYING CASE 9794

Carrying Case for PW3390 and 3390 448 mm (17.64 in) W x 618 mm (24.33 in) H x 295 mm (11.61 in) D

VOLTAGE CORD L1000

Red, yellow, blue, gray: 1 each; Black: 4 1000 V specification, Cord length: 3 m (9.84 ft) CAT IV 600 V, CAT III 1000 V

WIRING ADAPTER PW9000

When making a 3-phase 3-wire (3P3W3M) connection, this product allows you to reduce the number of voltage cords from 6 to 3.

GRABBER CLIP 9243

Red. black: 1 each Change the tip of the voltage cord to use CAT III 1000 V

WIRING ADAPTER PW9001

When making a 3-phase 4-wire (3P4W) connection, this product allows you to reduce the number of voltage cords from 6 to 4.

Connection Options

CONNECTION CORD L9217 BNC-BNC.

For motor analysis input Cable length: 1.6 m (5.25 ft)

LAN CABLE 9642

Supplied with straight to cross conversion connector, Cable length: 5 m (16.41 ft)

Built-To-Order (Other) D/A output cable

D-sub 25-pin - BNC (male) 16 ch conversion, Cord length: 2.5 m (8.20 ft)

Rackmount fittings

For EIA or JIS

CONNECTION CABLE 9683 RS-232C CABLE 9637

9pin-9pin cross Cable length: 1.8 m (5.91 ft) For synchronous measurement, Cable length: 1.5 m (4.92 ft)
