Switch/Control Mainframe

400-channel

The Model 7002 Switch System is a 10-slot mainframe that supports up to 400 2-pole multiplexer channels or 400 matrix crosspoints. The front panel includes a unique interactive display of channel status for quick programming. Scanning speeds of up to 300 channels per second are possible with the high density switch cards. The wide selection of more than 30 different switch cards makes the 7002 one of the most flexible switching mainframes available.

**Reduce the Size and Cost of Your Switching Application.**

Up to 400 channels of 2-pole switching. A single Model 7002 mainframe can accommodate up to ten 40-channel cards. That’s 400 channels in a single full-rack package that is only 178mm high (7 in). This level of density provides some important advantages. First, it reduces the amount of switching hardware required for a given application. Second, it provides high flexibility. The high density cards can be used with the special signal cards to cover all your signal needs for a large application with one mainframe.

**Switch a wide range of signals.** The 7002 is fully compatible with all 7001 switch cards. From this broad selection of more than 30 cards, you can assemble a switch configuration that will ensure signal integrity and minimize errors. These cards allow the 7002 to switch DC signals from femtoamps to kilovolts, as well as RF and optical signals.

**Analog backplane.** The analog backplane used by the high density cards adds configuration flexibility and eliminates intercard wiring. For example, the outputs of a multiplexer card can be connected to the row inputs of a matrix card. Or, the outputs of ten multiplexer cards can be connected to form one large 1×400 multiplexer. Intercard wiring is eliminated by using the analog backplane to form these configurations.

**Faster Test Development**

**Unique channel status display.** The interactive front panel display helps shorten the time required to configure the 7002 and develop test software. The display indicates the open/close status of each channel in the mainframe. This information is very useful when programming the 7002 and developing application software. Knowing the channel status also helps to verify proper operation during the debug phase.

**Light pen programming.** An optional light pen provides point and click programming from the front panel. By selecting the desired channels or range of channels, the scan list can be built, matrix patterns created, channels opened or closed, and patterns stored in memory. The 7002’s non-volatile memory stores up to 500 complete switch patterns.

**Automatic card configuration.** When the high density cards are installed, the 7002 automatically configures each slot independently for the proper card. The channel status display on the front panel adjusts to show each card’s capacity and configuration.

**Front panel Info key.** At the touch of a button, the operator receives context-sensitive, on-line information to help configure the system. This information is displayed on a 52-character alphanumeric display for clear and readable messages. There is no need to refer constantly to the operator’s manual. All information messages, operating instructions, and prompts are available in English, German, and French. Just select the desired language in the configuration menu.

**Programmable channel closure restrictions.** The 7002 allows specific channels to be locked out from closure. This restriction can be conditional based on the open/close state of other channels or crosspoints. This capability is useful to prevent certain signals from being accidentally connected to high power circuits, for example.

**ACCESSORIES AVAILABLE**

SWITCHING AND CONTROL

Model 7002 specifications

Model specifications

CARD SIZE:

RELAY DRIVE:

MAINFRAME DIGITAL I/O:

Status output: independent hardware trigger lines on a single cable.

Trigger Link gives you access to six independent hardware trigger lines on a single cable.

Built-in Scan Control and Trigger Link. The built-in scan control eliminates the need for the computer to control every step of the test procedure. Simply program the 7002 to control the computer to control every step of the test procedure. Additionally, the mainframe digital I/O feature allows for control of external devices.

System Throughput

300 channel per second scanning. The 7002 can scan through up to 300 channels per second. This scan process can be controlled by the internal time base of the 7002 or through external triggers. The scan sequence is controlled by what appears in the scan list. The scan list can include channels, ranges of channels, and memory locations. This approach gives maximum flexibility while obtaining maximum throughput.

THROUGHPUT

EXECUTION SPEED OF SCAN LIST (channels or memory locations per second):

Triggering Execution Time (maximum time from activation of Trigger Source to start of switch open or close):

- Break-Before-Make: On 9 ms + Relay Settle Time (BBM OFF)
- Relays (BBM ON): 3 ms

NOTES

1. Excluding switch settling time.
2. Assuming no IEEE-488 commands are pending execution.
3. Display off.

IEEE-488 COMMAND EXECUTION TIME

NOTES

1. Measured from the time at which the command terminator is taken.

IEEE-488 BUS IMPLEMENTATION

MULTILINE COMMANDS: DCL, LLO, SDC, GET, GTO, UNT, UNL, SFR, SPD.

UNILINE COMMANDS: FFC, REN, E01, SRQ, ATN.

INTERFACE FUNCTIONS: SH1, AH1, T5, TE0, L4, LE0, SRL, RLL, PPO, DCI, DTL, C0, E1.

POWER: 110V-120V ac, 220-240V ac, 50-60Hz, 110VA maximum.

EMC: Meets VDE 0871B and FCC Class B.

ENVIRONMENT: Operating: 0°C to 50°C, <80% RH (0°C to 35°C). Storage: -25°C to +65°C.

DIMENSIONS: 178mm high x 438mm wide x 448mm deep (7 in x 17 in x 17 in). Net weight 9.1kg (20 lb).

LED PEN OPTION: Provides interactive programming of channels, cross points, scan lists, and memory.

REAR PANEL CONNECTORS: IEEE-488, 9-pin DB9 Female, 8-pin DIN for Trigger Link, 8-pin DIN for Trigger Link expansion, BNC for External Trigger, BNC for Channel Ready.

POWER: 100V to 240V ac, 50/60Hz, 110VA maximum.

EM/RF: Meets VDE 0811B and FCC Class B.
