## Keysight Technologies

# InfiniiVision Oscilloscope Probes and Accessories

For 2000 X-, 3000A/T X-, 4000 X-, 6000 X-, 5000, 6000, and 7000 Series

Selection Guide

## Introduction

To achieve the best results from your scope, you need the right probes and accessories for your particular application. That is why Keysight Technologies, Inc. offers a complete family of innovative probes and accessories for InfiniiVision oscilloscopes. For the most up-to-date and complete information about Keysight's accessories, please visit our Web site at: www.keysight.com/find/probes

## **Table of Contents**

Probe Compatibility Table	3
Passive Probes	5
High-voltage Passive Probes	9
InfiniiMax Active Probes and Accessories	10
InfiniiMode Active Probes and Accessories	12
High-voltage Differential Active Probes	14
Single-ended Active Probes	18
Mixed Signal Oscilloscope Logic Probes	20
Clamp-on Current Probes	22
High-sensitivity Current Probes	24
Wedge Probe Adapters	26
Miscellaneous Accessories	27
T2A Probe Interface Adapter	29
Recommended Probes for Low-/Mid-speed Bus Measurements	30

## Probe Compatibility Table

For ordering information when replacing your probe or probe accessory: Refer directly to the page number listed in the Table of Contents for your probe model.

To assist you in selecting the proper probe for your application: Use our probe compatibility table below to find the probes that are recommended for use with your 2000 X-, 3000A/T X-, 4000 X-, 6000 X-, 5000, 6000, and 7000 Series InfiniiVision oscilloscope.

<sup>1.</sup> The 1130A probe amplifier supports both single- and differential-ended measurements. Higher bandwidth InfiniiMax probe model 1131A, 1132A, and 1134A are also supported by 3000 X-, 4000 X-, 6000 X-, 5000, 6000 300 MHz to 1 GHz models and, 7000 Series.

<sup>2.</sup> Recommended for InfiniiVision MSOs only.

<sup>3.</sup> These Infiniium active probes are not supported by InfiniiVision Series scopes – 1152A, 1153A, 1154A, 1155A, 1159A, 1168A, 1169A, N2800A, N2801A, N2802A, N2803A, N2830A, N2831A, N2832A, N7000A, N7001A, N7002A, and N7003A.

<sup>4.</sup> MSO/DS06000A 100-MHz models do not support any Keysight active probes with AutoProbe interface.

## **Passive Probes**

- Designed for optimal performance with your Keysight InfiniiVision Series oscilloscopes
- 1:1 and 10:1 attenuation ratio
- 20 to 700 MHz

# Rugged, high-quality probes at a reasonable price

Keysight 10070-family passive probes are a great choice if you are looking for high quality at a very reasonable price. These general-purpose probes are designed specifically to give you optimal performance with your InfiniiVision Series oscilloscopes. Ruggedized for general-purpose measurements, they feature a durable cable and a solid stainless steel probe body encased with a hard, fracture-resistant plastic. They are designed and tested to ensure the probes operate in the toughest of conditions

The N28xxA/B low-cost, generalpurpose passive probes provide up to 500 MHz bandwidth and feature a high input resistance of 10 M $\Omega$  for low probe loading. These probes provide a 10:1 attenuation ratio except for the N2889A. which provides a switch in the probe handle for switching the attenuation ratio between 1:1 and 10:1. The N284xA and N2853A are the new version of passive probes with improved frequency response over N2862B/63B/90A probes. This probe cable can be used in place of existing N2862B/63B/90A for better performance. The N2853A is a 10:1 passive probe with 2 m cable length for extended cable connection.

The N2873A/N2894A are 500-MHz/ 700 MHz 10:1 miniature passive probes that can be used with all InfiniiVision Series. Compact 2.5-mm probe head diameter, low input capacitance, and various fine-pitch probe tip accessories make the N2873A/N2894A passive probes ideal for probing densely populated IC components or surfacemount devices used in today's high-speed digital applications. The N2894A provides 700 MHz system bandwidth when used in conjunction with the 4000 X- and 6000 X-Series ≥ 1 GHz models. For more information about N2870A Series passive probes and accessories, refer to Keysight's literature number. 5990-3930FN

# Accessories available for 10070D/73D/74D passive probes

N4848A	Probe-tip-to-BNC (m) adapter, qty 2
5081-7696	Ground lead with alligator clip for 1007x and N2862B/63B/89A/90A
N4847A	Retractable hook tip for 1007xC/D (not compatible with 10076A/B), qty 2
N4849A	Dual-test lead adapter (for 10070/3/4x), qty 2
5081-7690	Replacement parts accessory kit
10072A	Fine-pitch probing kit includes 10 SMT clips and 2 dual-lead adapters
10075A	0.5 mm IC probing kit. Contains 4 0.5 mm IC clips and 2 dual- lead adapters

## Accessories available for N2862B/63B/89A/90A and N2840A/41A/42A/43A/53A passive probe

## N7007A Extreme Temperature Passive Probe

## Features and specifications

- Wide operating temperature range of –40 to +85 °C for extreme temperature environmental chamber testing
- 400 MHz bandwidth (-3 dB)
- High impedance (10 M $\Omega$  at DC) input
- Wide input range: 1 kV CAT II, 600 V CAT III
- Includes hook tip adapters (x2), ground leads (x2) and spring ground tip (x1)

The N7007A 400 MHz passive probe is a low-cost, high impedance passive probe with rugged probe tips for environmental chamber testing from –40 to +85 °C. Its large input impedance (10 M $\Omega$  at DC) and wide input voltage range (1,000 Vdc + peak AC CATII) makes the probe ideal for a broad range of general purpose extreme temperature applications.

	N7007A
Bandwidth	400 MHz (with spring ground), 70 MHz (with ground lead)
Attenuation ratio	10:1
Input impedance (at DC)	10 M $\Omega$ /15.5 pF (when terminated into 1 M $\Omega$ )
Oscilloscope compensation range	6 to 18 pF
Operating temperature range	-40 to +85 °C
Operating humidity range	< 90% at 40 °C
Cable length	2 m
Max input range	1 kV CAT II, 600 V CAT III

N7007A	10:1 400 MHz extreme temperature passive probe
N7006A	Spring ground for N7007A
N7008A	Hook tip adapter for N7007A
N7009A	Ground lead for N7007A

N7007A Extreme temperature passive probe

N7008A hook tip adapter

N7009A ground lead

## High-voltage Passive Probes

- Ideal for measuring up to 4 kV
- Up to 500 MHz bandwidth
- 100:1 attenuation

## 10076C high-voltage probe

The Keysight 10076C 4 kV 100:1 passive probe gives you the voltage and bandwidth you need for making high-voltage measurements. Its compact design makes it easier to probe today's small power electronics components and its rugged construction means it can withstand rough handling without breaking.

#### Characteristics 10076C

Bandwidth	500 MHz (-3 dB)	
Risetime (calculated) < 0.7 ns		
Attenuation ratio	100:1	
Input resistance $66.7 \text{ M}\Omega$ (when terminated into $1 \text{ M}\Omega$ )		
Input capacitance	Approx 3 pF	
Maximum input	4000 Vpk	
Compensation 6 to 20 pF range		
Probe readout	Yes	
Cable length	1.8 m

## InfiniiMax Active Probes and Accessories

# 1130A-34A InfiniiMax high-performance active probe system

- 1.5 to 7 GHz InfiniiMax probe system
- InfiniiMax probe amplifier supports both differential- and single-ended measurements for a more costeffective solution
- Unrivaled InfiniiMax probing accessories support browsing, solder-in, and socketed use models at the maximum performance available
- Compatible with 3000 X/T-, 4000 X-, 6000 X-, 5000, 6000, and 7000 Series oscilloscopes (except for 6000 Series 100-MHz models)

The InfiniiMax 1130A Series probe amplifier is a perfect complement to the InfiniiVision 1 GHz or higher bandwidth models. Its bandwidth, extremely low input capacitance (0.32 pF), high common mode rejection, and patented resistor probe tip technology provide ultra low loading of the DUT and superior signal fidelity. Keysight's innovative InfiniiMax 1130A Series differential probe is the easiest-to-use, highest performance probing system available for high-speed digital design, and represents a new industry standard for accuracy, flexibility, and reliability. Designers can achieve full system bandwidth in conjunction with InfiniiVision Series oscilloscopes even when manually browsing with the probe or making hands-off measurements.

Optional solder-in probe heads and solder-in sockets, as well as browser configuration provide full bandwidth at the probe tip.

Operating characteristics	
Probe bandwidth (-3 dB)	1134A: > 7 GHz 1132A: > 5 GHz 1131A: > 3.5 GHz 1130A: > 1.5 GHz
Rise and fall time (10 to 90%)	1134A: 60 ps 1132A: 86 ps 1131A: 100 ps 1130A: 233 ps
Input capacitance	Cm = 0.1 pF Cm is between tips Cg = 0.34 pF Cg is ground for each tip Cdiff = 0.27 pF differential mode capacitance = Cm + Cg/2 Cse = 0.44 pF single-ended mode capacitance = Cm + Cg
Input resistance	Differential mode resistance = $50 \text{ k}\Omega \pm 2\%$ Single-ended mode resistance = $25 \text{ k}\Omega \pm 2\%$
Input dynamic range	± 2.5 V
Input common mode range	± 6.75 Vdc to 100 Hz; ± 1.25 V > 100 Hz
Maximum signal slew rate	18 V/ns when probing a single-ended signal 30 V/ns when probing a differential signal
DC attenuation	10:1 ± 3% before calibration on oscilloscope 10:1 ± 1% after calibration on oscilloscope
Offset range	± 12.0 V when probing single-ended signal
Maximum input voltage	30 Vpeak, CAT I

## InfiniiMode Active Probes and Accessories

#### N2750A-52A InfiniiMode probe

- 1.5 to 6 GHz bandwidth
- Dual attenuation ratio (2:1/10:1)
- InfiniiMode probing for making differential, single-ended and common mode measurements with a single probe
- Built-in quick action scope control for quick access to a variety of scope functions
- Built-in headlight
- Includes solder-in, browser, and socketed tips standard
- AutoProbe interface for auto configuration and probe power

The N2750A Series InfiniiMode differential probe is a new generation of low-cost, differential active probe compatible with InfiniiVision 3000 X-, 4000 X-, 6000 X-Series and Infiniium oscilloscope's AutoProbe interface.

#### Measurement versatility

The N2750A Series InfiniiMode probe offer 2:1 and 10:1 dual attenuation settings, allowing them to be used for a broad range of applications. Dual attenuation range is automatically configured depending on the size of the input signal.

The new differential probe has an input resistance of 200 k $\Omega$  (differential) or 100 k $\Omega$  (each input to ground), and an extremely low input capacitance of 700 fF to minimize circuit loading.

This, accompanied with superior signal fidelity, makes these probes useful for most digital design and debug applications. And with their wide dynamic range (10 Vpp) and offset range (± 15 V), these probes can be used in a wide variety of analog signal measurements as well.

#### InfiniiMode usability

The N2750A comes with new InfiniiMode operation modes. The InfiniiMode allows convenient measurements of differential, single-ended, and common mode signals with a single probe tip without reconnecting the probe to change the connection. The N2750A probe's InfiniiMode provides the following modes of operation.

- A B (differential),
- A ground (single-ended A)
- B ground (single-ended B)
- (A+B)/2 ground (common mode)

## Quick action scope control

The N2750A Series InfiniiMode probe provides convenient and quick access to various functions on the scope. You often have a need to control the scope while you hold a probe in your hand. With the quick action scope control feature built into the probe, you can turn the built-in headlight of the probe on and off, or control some frequently used scope functions such as RUN/STOP, auto scale, quick print, and quick save with only a button press on the probe. Get control of your most needed function with a push of the quick action control button on the probe.

Flexibility in probe use models is also a vital necessity. The probes come standard with three different types of exchangeable probe tips that allow for easy connections to the circuit under test. These probe tips enable you to access multiple signals on anything from header connectors to hard-to-reach, high-density circuitry. The probes are equipped with a white LED headlight to illuminate the circuit under test which will help you see where you are probing.

This probe is compatible with InfiniiVision 3000 X-Series with software ver. 2.2 or above, 4000 X-Series with software ver. 3.01 or above, and 6000 X-Series with software ver. 6.00.

## High-voltage Differential Active Probes

- 25 to 800 MHz bandwidth
- Switchable attenuation
- Measure up to 1,400 V CAT II and 7 kV CAT I

## N2790A/91A and N2891A high voltage differential probes

Oscilloscope users often need to make floating measurements where neither point of the measurement is at earth ground. Use N2790A, N2791A, or N2891A high voltage differential probes to make safe and accurate floating measurements with an oscilloscope. The N2790A, N2791A, and N2891A high voltage differential probes allow conventional earth-grounded Keysight oscilloscopes to be used for floating signal measurements.

Each probe offers user-selectable attenuation settings that makes it highly versatile, allowing it to be used for a broad range of applications. The probe comes with probe tip accessories for use with small and large components in tight spaces.

The N2791A and N2891A are compatible with any oscilloscope with 1 M $\Omega$  BNC input. The N2791A and N2891A probe power is supplied by included 4x AA batteries or USB host port of the scope or PC via a supplied USB power cable. The N2790A is compatible with the Keysight's AutoProbe interface where the probe power is supplied by the Keysight oscilloscope's probe interface.

#### 1141A 200 MHz differential probe

The 1141A is a 1x FET differential probe with 200-MHz bandwidth and a 3000:1 CMRR. The probe has a high-input resistance and low-input capacitance of 7 pF to minimize circuit loading. The 1141A must be used with 1142A probe control and power module, which controls input coupling modes dc, dc with variable offset, and dc reject. Two attenuators, 10x and 100x are provided to expand the linear differential input range to  $\pm$  30 V. This probe works with any  $50-\Omega$  input oscilloscope including 3000 X-, 4000 X-, 5000, 6000X, 6000, 300 MHz to 1 GHz, and 7000 Series.

	N2790A	N2791A	N2891A

## High-voltage Differential Active Probes (Continued)

#### N7013A extreme temperature extension cable kit

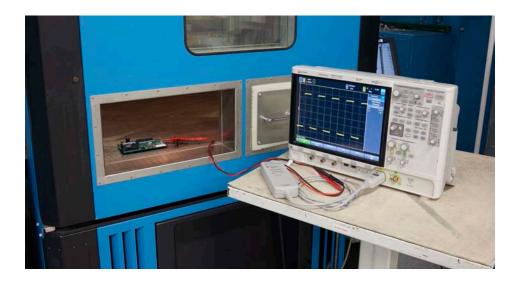

The N7013A is a 70-cm long extreme temperature extension cable kit compatible with four of Keysight's medium- and high-voltage differential active probes, including the N2790A, N2791A, N2792A, and N2818A. These probes are typically used in power supply testing applications, as well as testing automotive differential buses including CAN, CAN FD, and FlexRay. With the N7013A extension kit, the main body of the temperature-sensitive differential active probe can be placed outside of the environmental chamber, while the extension kit (70-cm long cable pair) and connection adapters can be extended into the environmental chamber under extreme-temperature conditions ranging from -40 to +85 °C.

#### The N7013A kit includes:

- 1 pair of extreme-temperature differential extension cables
- 1 pair of extreme-temperature hook tip adapters
- 1 pair of extreme-temperature banana-to-socketed tip adapters for connecting to 0.025" square pins

The N7014A accessory includes: 1 pair of banana-to-socketed tip adapters

Key characteristics	
Temperature range	−40 to +85 °C
Cable length	70 cm
Derated bandwidth N2818A, N2792A, N2790A	70 MHz
Derated bandwidth with N2791A	25 MHz

N7007A extreme temperature passive probe

## High-voltage Differential Active Probes (Continued)

## N2804A/N2805A high-voltage, high-speed differential probes

The N2804A and N2805A differential probes provide the superior general-purpose differential signal measurements that are required for high-speed power measurements such as measuring characteristics of switching power devices, DC-DC converters or class D amplifiers, vehicle bus measurements, and high-speed digital system designs.

The N2804A 300-MHz differential probe offers 100:1 attenuation ratio, allowing it to be used adequately for high voltage signal measurements. The differential probe has a differential input resistance of 4 M $\Omega$  and low input capacitance of 4 pF to minimize circuit loading. The probe comes with a pair of extension leads (30 cm long) with a damping resistor built-in to damp out the in-band resonance and provide flat frequency response even while using the extension leads and probe tip accessories.

The N2805A is a 200-MHz differential probe designed to provide superior differential signal measurements with a long cable length (5 m), making it ideal in an environment where extended cable length is required. This probe comes with an extensive set of probe tip accessories for use with small and large components in tight spaces.

	N2804A	N2805A

## High-voltage Differential Active Probes (Continued)

# N2792A/N2818A 200-MHz and N2793A/N2819A 800-MHz general-purpose differential probe

The N2792A/N2818A 200-MHz and N2793A/N2819A 800-MHz differential probes provide the superior general-purpose differential signal measurements required for today's high-speed power measurements, vehicle bus measurements, and digital system designs.

The N2792A/N2818A and N2793A/N2819A probes offer a 10:1 attenuation setting, high input resistance, and low input capacitance to minimize circuit loading.

The N2792A/93A are compatible with any oscilloscope with  $50\,\Omega$  BNC input. The probe can be powered by any USB port on a scope or computer, or by a 9 V battery. The N2818A/19A are the AutoProbe interface versions of the N2792A/93A. They are compatible with the InfiniiVision 3000 X-, 4000 X- and 6000 X-Series only.

## Single-ended Active Probes

# N2795A/96A/97A low-cost single-ended active voltage

- High resistance (1  $M\Omega$ ) and low capacitance (1 pF) input for low loading
- Wide input dynamic range (± 8 V) and offset range (± 12 V for N2796A/97A, ± 8 V for N2795A)
- Built-in headlight
- Direct connection to AutoProbe interface (no power supply required)
- N2797A for extreme temperature environmental chamber testing at -40 to +85 °C

The N2795A/96A are a new generation of low-cost, 1 to 2 GHz single-ended active probes with the AutoProbe interface (compatible with Keysight's InfiniiVision and Infiniium family of oscilloscopes). These probes integrate many of the characteristics needed for today's general-purpose, high-speed probingespecially in digital system design, component design/characterization, and educational research applications. Its 1 M $\Omega$  input resistance and extremely low input capacitance (1 pF) provide ultra low loading of the DUT. This, accompanied with superior signal fidelity, makes these probes useful for most of today's digital logic voltages. Testing devices over extreme temperature ranges is quite common these days. The N2797A 1.5 GHz single-ended active probe is the industry's first low-cost high input impedance active probe with rugged probe tips for environmental chamber testing of ICs and devices. It gives the ability to probe signals at drastic temperature swings ranging from -40 to +85 °C. The probe provides a 2 m long cable. Order N2798A for re-ordering accessories.

The N2795A/96A/97A are equipped with a white LED headlight to illuminate the circuit under test. The probes are powered directly by the InfiniiVision and Infiniium Autoprobe interface, eliminating the need for an additional power supply. The probes also come with a number of accessories that allow for easy connections to the circuit under test.

## Single-ended Active Probes (Continued)

#### N7020A power rail probe

- 2-GHz single-ended active probe for power rail noise measurement
- 1:1 attenuation ratio ensures low noise signal measurement
- $-\pm24$  V of probe offset range enables effective elimination of DC component of a power supply.

The N7020A power rail probe is a low noise, large offset range oscilloscope probe that enables users to measure small signals riding on top of DC power rails.

- Low noise: The N7020A power rail probe is a 1:1 attenuation ratio active probe. As
  a general rule, the higher a probes attenuation ratio, the nosier the signal will be on
  the oscilloscope.
- Large offset range: The N7020A power rail probe provides ± 24 V of probe offset.
   This enables users to center the signal on screen while placing the oscilloscope at its maximum vertical sensitivity and zoom in on the signal.
- Low DC loading: The N7020A power rail probe has 50 k $\Omega$  input impedance at DC, minimizing the probe's DC loading of the power rail.
- Large input dynamic range: The N7020A power rail probe's ± 850 mV input dynamic range means that users can measure up to ± 850 mV deviations of their DC supplies. This is very useful for measuring programmable supplies like those used in microcontroller power saving modes.
- Supporting three connection options pigtail solder head (2 GHz), SMA (2 GHz), and browser (350 MHz).

Characteristics and specifications	
Probe bandwidth (-3dB)	2 GHz
Attenuation ratio	1:1
Offset range	± 24 V
Input impedance at DC	50 kΩ
at > 1 MHz	50 Ω
Input dynamic range	± 850 mV

## Mixed Signal Oscilloscope Logic Probes

- Compatible with all 40-pin logic probes
- Flying leads offer flexibility and convenience

# MSO probes offer great value and performance

These logic probes for the InfiniiVision mixed signal oscilloscopes (MSOs) are the same ones used with Keysight industry-leading high-performance logic analyzers. This means we can offer the best performance, great value, and access to the industry's broadest range of logic probing accessories.

The N2756A 4 x 4 signal logic probes are divided into four sets of four channels so you can probe pins that are far apart and work conveniently with only one set if that's all you require. For optimal signal fidelity, connect ground at each logic probe, in addition to taking a common ground to all four signals via a separate ground connector on the probe pod. The N2756A probe is included with 3000, 4000, and 6000 X-Series MSOs.

The N2755A is an 8-channel MSO logic probe designed to work with the 2000 X-Series MSOs.

# Characteristics for Keysight 54620-68701, N6450-60001, N6459-60001 logic probes

	<u> </u>
Input impedance	100 kΩ
Input capacitance	8 pF

The 01650-61607 is the 40-pin (F) to 40-pin (F) logic probe cable for Keysight's InfiniiVision and 54600 Series MSOs. This cable gives the MSO the standard 40-pin female input connector that many Keysight logic analyzers have. With this cable, a user can connect a wide variety of logic analyzer probes such as Mictor, Samtec, and Soft Touch probes.

## Mixed Signal Oscilloscope Logic Probes (Continued)

The InfiniiVision MSO digital channels were designed to be compatible with a wide variety of probing accessories developed over 20 years for logic analyzers. There is a good chance that the logic analyzer accessories you already own work with your MSO. With the addition of an optional 40-pin cable, 01650-61607, the MSO accepts numerous logic analyzer accessories:

- E5346A 34-channel Mictor connector probe
- E5385A 34-channel Samtec connector
- E5383A 16-channel flying lead set
- 01650-63203 16-channel termination adaptor (also available as a bundle of both the termination adapter and the 40-pin cable with PN 10085-68701)
- E5404A 34-channel soft touch pro connectorless probe
- E5394A 34-channel soft touch connectorless probe
- E5396A 16-channel soft touch connectorless probe
- Any other accessory that connects to a logic analyzer via a 40-pin cable

For logic accessories of greater channel width than MSO digital channels (> 16 channels), there are two use models.

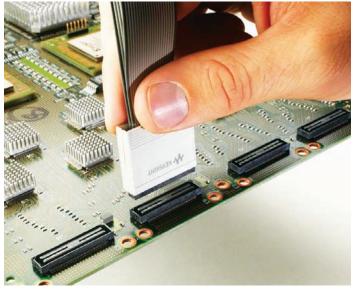

- Route up to 16 signals to the probe and do not use the additional probe channels.
- Route up to 32 signals to the probe and measure half of them at a time. Simply plug the 40-pin cable to the other side of the probe to see the other half of the signals.

E5396A 16-channel soft touch connectorless probe

E5346A 34-channel Mictor connector probe

E5385A 34-channel Samtec connector probe

## Clamp-on Current Probes

- Up to 100 MHz bandwidth and 500 Arms current measurement range
- Hybrid technology to measure ac and dc
- Compatible with 1  $M\Omega$  scope input

# Accurate current measurements without breaking the circuit

Compatible with any scope or voltage measuring instruments with BNC input, the 1146B and N2780B Series current probes offer accurate and reliable solutions for measuring dc and ac currents. The probes use a hybrid technology that includes a Hall effect sensor that senses the dc current, and a current transformer that senses the ac current, making it unnecessary to make an electrical connection to the circuit.

#### 1146B 100 kHz current probe

The 1146B ac/dc current probe provides accurate display and measurement of currents from 100 mA to 100 Arms, dc to 100 kHz, without breaking into the circuit. A battery level indicator and overload indicator help ensure proper readings. It connects directly to the scope through a 2-m coaxial cable with an insulated BNC.

1147B 50-MHz current probe with AutoProbe interface

1146B 100-kHz current probe

## 1147B/N2893A 50-MHz/ 100-MHz current probe with AutoProbe interface

The 1147B/N2893A is a wide bandwidth, dc to 50-MHz/100-MHz current probe. The probe offers flat frequency response across the entire dc to 50-MHz/100-MHz bandwidth, low noise (< -2.5 mArms) and low circuit insertion loss.

The 1147B/N2893A probe is compatible with the AutoProbe interface, which completely configures the oscilloscope for the probe when used with the 3000 InfiniiVision Series scopes with AutoProbe interface. Probe power is provided by the scope, so there is no need for an external power supply. The N2893A uniquely provides auto demagnetization and offset elimination feature when used in conjunction with InfiniiVision or Infiniium scopes.

N2893A 100-MHz current probe with AutoProbe interface

## N2780B/81B/82B/83B/83L 2-MHz/10-MHz/50-MHz/ 100-MHz current probes

The N2780B Series current probes are high bandwidth, active current probes, featuring flat bandwidth, low noise (2.5 mArms) and low circuit insertion loss. In conjunction with the power supply (model N2779A), these probes can be used with any oscilloscope having a high-impedance BNC input. The companion power supply N2779A (3 x 12 Vdc output) lets you connect up to any three N2780B-83B current probes to a single power supply.

The N2783L 80 MHz current probe offers a 5-m long cable, which allows you to reach DUTs over long distances very easily. Other than the bandwidth performance, the N2783A and N2783L have the same electrical performance. The N2783L also requires the N2779A power supply to power the probe.

N2780B Series current probes with N2779A power supply

## High-sensitivity Current Probes

- Measure AC/DC currents as low as  $50 \,\mu\text{A}$
- Ideal for capturing and analyzing low level current flow in the DUT to characterize sub-circuits or measure current consumption of batterypowered devices or integrated circuits
- Simultaneous high- and low-gain views of the current waveform for more precise wide dynamic range measurement (with N2820A)

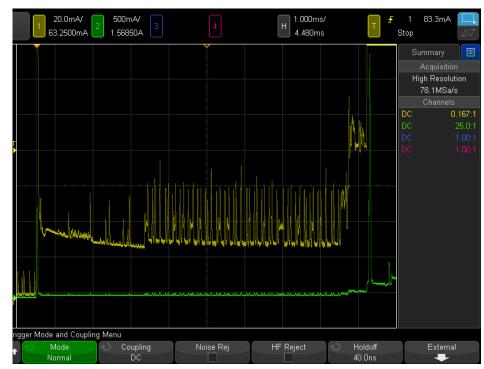

As modern battery-powered devices and integrated circuits become more green and energy efficient, there is a growing need to make high-sensitivity, low-level current measurements to ensure the current consumption of these devices is in acceptable limits. The N2820A high-sensitivity probe is engineered to make high-dynamic-range, high-sensitivity measurements to meet today's challenging current measurement needs.

The ultra-sensitive N2820A AC/DC current probe can support measurements from 50 µA to 5 A on Keysight oscilloscopes. The N2820A interface uses a make-before-break (MBB) connector, allowing you to quickly probe multiple locations on your DUT without having to solder or unsolder the leads. The N2820A 2-channel current probe connects to two oscilloscope channels to provide simultaneous low-and high-gain views for wider dynamic range measurement, while the N2821A 1-channel current probe provides one user-selectable view at a time.

Use an area-under-the-curve measurement (Charge) on InfiniiVision oscilloscopes to easily calculate the integrated current consumptions over time in Ah.

The N2820A/21A high-sensitivity current probes are compatible with InfiniiVision 3000 X-, 4000 X- and 6000 X-Series oscilloscopes.

The N2820A 2-channel current probe connects to two oscilloscope channels to provide simultaneous low- and high-gain views for wider dynamic range measurement

## Wedge Probe Adapters

- Easy connection to surface mount ICs
- Safe, with no chance of shorting
- Mechanically non-invasive contact
- 3-, 8-, and 16-signal versions
- Supports 0.5 and 0.65-mm
- TQFP and PQFP packages

## Problem-free probing

The Keysight wedge probe adapter eliminates many of the frustrations associated with probing surface mount components. If you have ever accidentally shorted IC pins together, experienced electrical and/or mechanical problems with soldering small wires onto leads, or gotten frustrated juggling multiple probes while you are trying to operate your scope, the Wedge was designed with you in mind.

## Make the inaccessible accessible

When you use the Wedge, you do not have to worry about shorting IC pins together on a delicate component—or on an irreplaceable prototype. The Wedge is easy to insert and it stays put. There is no need to solder small wires onto leads. The Wedge is mechanically non-invasive, so you will not damage the legs of the IC. Instead, you will have easy access to hard—to-reach components.

## Electrical reliability

The Wedge makes two contact points with each leg of the IC. This redundant physical connection increases the electrical reliability of the connection. The Wedge's low capacitance and inductance provides superior performance to many other alternatives.

The Wedge probe adapter connects directly to 1145A/1155A active probes and the dual lead adapter provided with the 1160A-65A passive probe family and N2877A/N2879A accessory kits for use with N287xA Series passive probes.

## IC clip kits

An inexpensive solution for probing fine-pitch ICs, the 10072A SMT kit includes 10 IC clips and 2 dual-lead adapters that connect the clips directly to 10070-family probes.

The 10075A 0.5-mm IC clip kit is ideal for connecting to ICs as fine as 0.5 mm. The clip body allows many clips to be mounted side-by-side. The kit includes four 0.5-mm IC clips and two dual-lead adapters that connect the IC clips directly to 10070-family probes.

## Miscellaneous Accessories

#### Testmobile

The sturdy Keysight 1180CZ Testmobile for use with 6000 Series oscilloscopes makes sharing your scope easy. Its large wheels make it easy to roll from place to place. For use with the Keysight 6000 Series scope, the 1180CZ Testmobile scope cart with the N2919A bracket provides convenient mobility and secure mounting of your scope.

## Specifications for the Keysight Testmobiles

1180CZ	
Total load capacity	59 kg (130 lbs)
Tilt tray	45.7 cm wide x 45.7 cm deep (18 in wide x 18 in deep)

#### Carrying cases

The Keysight N6457A soft carrying case makes transporting and shipping your 2000 X- and 3000 X-Series oscilloscope safe and simple. An oscilloscope and other accessories fit neatly inside the padded shell for shipment. For use with the 7000, 4000 X-, and 6000 X-Series, order N2733B soft carrying case.

N2760A soft carrying case for the 5000 Series

 $\ensuremath{\text{N}2733B}$  soft carrying case for 7000, 4000 X-, and 6000 X-Series

#### Rackmount kit

The Keysight N2916B rackmount kit positions your 5000 and 6000 Series scope in the center of the rack. Each kit includes a custom shelf with rails, six BNC pass-throughs and all necessary screws. For mounting the 7000 Series in the rack, order N2732A. For mounting all 2000 X- and 3000 X-Series in a rack, order N6456A. For mounting any 4000 X-Series in a rack, order N2763A. For mounting a 6000 X-Series in a rack, order the N2111A.

## Probe positioners

- Easy-to-manipulate probe arms for hands-free browsing
- One- or two-articulated arms with stable high-mass base (N2784A and N2785A)
- Quick and stable XY positioning (N2786A)
- Stable 3D probe positioning for hardto-reach XYZ access (N2787A)
- Compatible with most scope probes
- Applications: Hands-free browsing for electronic components on PC board

The N2784A and N2785A probe positioners provide quick and stable X-Y positioning for PC boards and devices that require hands-free probing.

Unlike other probe positioners that require multiple adjustments to lock the probe holder into position, the N2784A and N2785A need only the "lift and drop" motion to put the probe in place. The weight stabilization technique used in these probe holders keeps constant pressure at the probing point so the probe tip stays in position even when the target board is bumped.

The N2786A is a low cost, easy-to-use X-Y axis probe holder for general purpose probing applications. The two-legged positioner is designed to be easy to use-the positioner itself has no controls to position it in place.

The N2787A is a 3D probe positioner with a flexible, articulating arm that can be quickly positioned in a variety of configurations.

For more information about Keysight's probe positioners, refer to literature number 5989–9131EN.

## N2744A T2A Probe Interface Adapter

- Enables Tektronix TekProbe-BNC level 2 probes to connect to Keysight's AutoProbe interface on InfiniiVision 3000 X-, 4000 X-, 6000 X-, 5000, 6000, and 7000 oscilloscopes
- An easy-to-use plug-on adapter to the Keysight oscilloscope's AutoProbe interface
- Provides necessary probe power, calibration, and offset control as needed to the attached TekProbe probe

The N2744A T2A interface adapter enables selected TekProbe interface level 2 probes to be used with Keysight oscilloscopes with the AutoProbe interface. Existing TekProbe-BNC probe types can simply be plugged into the T2A adapter, which is then plugged directly into any AutoProbe input channel on an InfiniiVision or Infiniium oscilloscope. Select the probe model in the scope menu and the Keysight oscilloscope sets up the attenuation factor and the probe type automatically. The T2A interface adapter supplies the necessary probe power, calibration (for selected models only), and offset control as used by the connected TekProbe probe. The adapter is targeted for customers using both Tek active probes with TekProbe-BNC level 2 interfaces and Keysight oscilloscopes with the AutoProbe interface.

## Tek probe compatibility

The N2744A T2A adapter supports only the probes listed with TekProbe interfaces.
