

STAT-LES STRIPPER #457

Floor Stripping - STAT-LES STRIPPER #457

Sweep up all debris on the floor to be stripped. Mix STAT-LES STRIPPER #457 to the proper strength to properly remove the accumulated existing floor Finish. To remove 3 to 4 coats of finish, mix 1 gallon of STAT-LES STRIPPER #457 with 3 gallons of hot water. Mop the solution directly onto the floor, allowing the solution 5 to 10 minutes to soften the finish. DO NOT ALLOW THE SOLUTION TO DRY. Using a low speed (170 RPM) floor machine and "black" stripping pad, run the machine slowly across the area to be stripped; first in an east to west direction, then in a north to south direction. This procedure will remove all the finish. In the case of heavy accumulation, the floor may need to be spot stripped a second time. Again, DO NOT ALLOW THE STRIPPER SOLUTION TO DRY AT ANY TIME. Pick up solution by mop or wet vac and immediately rinse this floor twice by flooding with cold water and again picking up by mop or wet vac.
