

****NEW Product Announcement****

Nov 24th, 2025

MicroDrive™ Tip-Heater Cartridges are Now Available!

The MicroDrive™ series is engineered to meet the evolving demands of micro-electronics, from ultra-fine SMD rework to high-density board repair in critical industries. By minimizing thermal lag, Micro-Drive tips ensure that the temperature you set is the temperature the tip delivers, giving technicians increased confidence and repeatability in intricate soldering operations.

Built with a premium long-life plating that resists oxidation and maintains thermal performance over time, Micro-Drive™ tips provide consistent, repeatable results across high-precision environments, from electronics manufacturing to aerospace and medical device assembly. Compatible with the TD-200 Soldering Iron, all Micro-Drive™ tips work seamlessly with PACE's AccuDrive® systems, including the ADS200, MBT360, and MBT450.
