

Duct Seal Technical Info and Applications

Duct Seal is an oil based compound used to seal around openings where wires and cables are running through. Keeps moisture out and also protects the wires and cables coming in and out of a tube or opening.

- Duct Seal Compound is available in individual 1 lb. bricks and 5 lb. brick packages. Each Duct Seal package is individually wrapped in plastic and placed in a cardboard box.
- It is hand applied by removing the backing and applying around the area.
- Has excellent adhesion to clean dry surfaces such as metal, masonry, wood and most plastics.
- Duct Seal is not UV resistant. Continued exposure to UV will cause the top 1/6" to 1/8" to dry out and will lose its pliability.
- Duct seal has a minimum shelf life of 10 years.

Below are some pictures on application of duct seal compound in the field and in the home.
