key features and benefits

Works with all Panduit® Opticom® LC, SC, ST, MT-RJ and MTP* Connector Fiber Adapter Panels	Provides versatility and flexibility with a fully modular solution for a variety of fiber optic patching, terminating, and splicing applications
Integral cable management	Provides proper cable routing pathways and ensures minimum cable bend radius for end-to-end signal integrity
Bi-directional pullout drawers (FRME1U and FRME2U)	Improves front access to patch cords and connectors and rear access to terminations, slack storage and trunk cable/inter-connect cables; faster and easier installation for lower total installed cost and reduced maintenance costs
Hinged, removable front and rear doors	Enables access to fiber optic patch cords without needing to move drawer for easier moves, adds, and changes
One-to-one patching and splicing capability (FRME1U and FRME2U)	Yields higher port densities for fusion splice applications with one-to-one patching-to-splicing fiber count for up to 72 splices per RU
TIA-606-A compatible labeling	Standards-based, mechanically printed labeling of fiber connectivity, patchfields, and enclosures enables clear and accurate labeling for easy moves, adds and changes

applications

Opticom® Rack Mount Fiber Enclosures provide a flexible system suitable for managing fiber terminations, connections, and patching in all types of applications. The enclosure can serve as a transition from backbone cabling to distribution switching in telecommunications rooms or closets, an interconnect to active equipment in server cabinets or switch racks, or can be specified for cross-connect or inter-connect use in a main distribution area or horizontal distribution area.

The enclosures can manage from 12 to 72 fibers in 1 RU and up to 288 fibers in 4 RU when used with standard FAP and FMP series adapter panels loaded with LC, SC, ST, MT-RJ, or MTP* style adapters. Integral cable management, bend radius control, and slack management features protect fiber optic cables, patch cords, and connectors ensuring end-to-end signal integrity for increased network reliability.
