

PatchRunner™ 2 Enhanced Vertical Cable Manager with Vertical Patching

specifications

The Patchrunner™2 Enhanced Vertical Cable Manager with Vertical Patching shall consist of a metal backbone with cable management fingers that align with EIA rack spacing. The backbone shall be an open design that will accept 19" EIA accessories such as patch panels, strain relief bars, blanking panels, and a PDU mounted vertically in a zero RU format. The fingers shall be molded out of plastic and provide integral bend radius control throughout the entire length. Finger sections shall be removable. The manager shall accept a metal, hinged, push-to-close door that can open to the right or left. The vertical panel shall be able to manage all the cable on the rack without the aid of horizontal cable managers.

key features and benefits

Integral EIA 19" Zero RU Mounting	Allows mounting of many standard EIA 19" accessories such as patch panels, strain relief bars, and blanking panels, within the vertical channel of the manager
26.8" Extra Deep Manager	26.8" depth at a 60/40 split provides the highest capacity for latest high performance switches and Category 6A cabling
Improved Door Function	"Push-to-close" door design allows for easy operation
Dual Hinged Doors are Included	Doors ship with manager, simplifying ordering process with less packaging waste
Color Options	Managers and doors now available in black and white as standard
Highest Density with Increased Cable Capacity	Up to 45% more usable capacity over PR2V manager
Bend Radius Control	Fingers support cables as they transition to vertical pathway while maintaining cable bend radius control, ensuring network performance and system reliability
Optional Accessories	Allows for personalization based on network equipment needs

applications

Panduit Patchrunner™2 Enhanced Vertical Cable Manager with Vertical Patching is designed to manage, protect, and showcase cabling for the latest high performance switching equipment. Ideal for the highest-density cabling environments, the depth of the cable manager, and the integral Zero RU patching within the vertical channel saves up to half the space of a traditional

cabling management system. This reduction in square footage combined with simplified part number ordering leads to cost savings for the overall network infrastructure. When used with Panduit connectivity, patch cords, and racks, the user receives a complete cable management solution that maximizes density while minimizing the area required for their network.
