

Shelf Life Policies

Film:

Film without adhesives has a shelf life of 4 years from the date of manufacture. Both the manufacture date and expiration date can be found on the COC.

PSA Tape:

Standard shelf life for most tapes with pressure sensitive adhesive (PSA) is 2 years from date of manufacture, when stored in room conditions with temperature of 75 degrees F and relative humidity of 50%. Both the manufacture date and expiration date can be found on the COC.

Other:

For product not listed above, the shelf life can be found on the COC, or can be obtained by contacting customer service.

After expiration of the minimum shelf life, or in situations where the product may not have been handled or stored properly, the customer is advised to evaluate the product for conformity with specifications and suitability for the use intended. Although there are exceptions, in many cases, if properly handled and stored, product will remain suitable for use for a significant period beyond the minimum shelf life

Techni-Pro recommends that all material be stored in their original shipping cartons at ambient temperature 75 degrees F and relative humidity of 50%.
