## Product Data Sheet

---

Product Number: 758AP2002P

Model: Non-Skid Conductive Shoe Covers, 100/pkg, Large

### Description:

Shoes Cover with Conductive Strips are an economical way to maintain cleanliness and ESD protection in controlled environments and static sensitive areas. The durable shoe covers are made from two (2) pieces of heavy-weight 1.25oz (40 gm) polypropylene and work well when worn inside laundered boot covers. The surged-seam inside shoe cover design features an elastic opening that fits most regular shoe styles. A full length non-woven conductive carbon strip is added to the bottom of our Shoe Covers. The strip provides adequate length for body contact when worn with most shoe styles. The conductive strip provides a ground path for the operator to remain static free.

### Scope:

ESD shoe covers are an effective line of defense that will keep your devices, products, and environments safe. They'll also limit contamination and keep your cleanrooms and products sterile. The Shoe Covers can be used in ESD-sensitive production areas where street-shoes may contaminate the area.

Conductive Strip	Yes
Skid Free	Yes
Size	Large
Material	100% Polypropylene
Color	Blue
