

BETTER TESTING. FASTER.

AFG31000 Series Arbitrary/Function Generator

Are you a researcher or engineer generating increasingly complex tests to debug, troubleshoot, validate, and/or characterize your designs? Tektronix has redefined the arbitrary/function generator with the new AFG31000 Series – a powerful, affordable, and easy-to-use AFG. It offers real-time waveform monitoring, optional programmable waveform sequencing, and the industry's first AFG touchscreen to significantly boost productivity and efficiency.

The large capacitive touchscreen and built-in ArbBuilder tool enables users to create and edit arbitrary waveforms right on the instrument.

APPLICATIONS

- Analog circuit characterization
- Replication of real world signals
- Function verification and performance characterization
- Clock and system synchronization
- Pulses to drive power devices
- Advanced research and education
- Embedded circuit design and test
- General purpose signal generation

SAVE TIME AND EFFORT WITH THE NINE-INCH TOUCHSCREEN

The AFG31000 Series features the industry's largest AFG touchscreen; pinch, zoom, and scroll just like a smart device to easily locate settings and parameters on the simple menu or shortcuts to frequently-used settings.

VERIFY YOUR WAVEFORM AT THE DEVICE UNDER TEST

Patented InstaView™ technology lets you see the actual waveform at the device under test (DUT) in real time – without an oscilloscope or probe – eliminating any uncertainty typically caused by mismatched impedance.

GENERATE MULTIPLE WAVEFORMS WITH COMPLEX TIMING

Advanced waveform generation and programming capabilities make it easy to compose a list or a sequence of 1 to 256 waveforms with total waveform length up to 16 Mpts/ch (128 Mpts/ch optional) and define the output sequence of these waveforms.

CREATE AND EDIT ARBITRARY WAVEFORMS ON THE AFG

The built-in ArbBuilder editing tool includes everything you need to create, edit, and transfer an ARB waveform without the need to connect to a PC.
