Recommended tools

The Shure Stake® mechanism on mechanical ratchet tools and power tools helps prevent the dies from releasing the terminal until the proper compression has been completed. With this method, an operator achieves a reliable crimp every time. ABB tooling techniques correctly match tools, wire size and terminal to produce optimum mechanical and electrical performance.

 Tool Services

Sta-Kon® Comfort Crimp Compression Tools were already among the industry leaders in manual crimp tools. Now, ABB engineers have made a great line of tools even better with the newly redesigned Sta-Kon® Comfort Crimp Compression Tools. We kept all the performance features that made the tools industry leaders such as the Shure Stake mechanism and interchangeable dies with colorcoded die nests, and focused on creating the best possible user experience in terms of comfort and reduction of strain.

Ergonomic handles position the user's hands correctly to minimize the risk of strain, and soft, over-molded grips cushion fingers and palm for user comfort. A new Crimp Assist[™] foot stabilizes the tool when the user needs to place it on a work surface for leverage to crimp larger connectors. Best of all, the redesigned Comfort Crimp tools require 25% less handle force to complete the crimp cycle than the previous generation.

Requiring the lowest handle force of any tool in its class, the new Comfort Crimp family provides maximum comfort to installers, without sacrificing the durability or performance associated with ABB tools.
